It's not a question of can't. It's a question of don't want to.

Look at a Mini-Circuits catalog sometime. What people would have given for those parts in 1940...0r 1960?
http://www.minicircuits.com/

My biggest beef with ARRL handbooks were they were too specific to Amateur radio. If you knew RF theory and good design practice you could build anything you wanted. They used to publish all these homebrew receivers that were actually poor designs because they assumed the amateur wanted a ham-band-only receiver and nothing else, and also did not have a generator to align them with. They were also very trendy in that when the new came in they promoted it to the exclusion of all else. For example, they went over 100% to solid state on PCBs in the early 70s, despite the fact a lot of hams never liked making PC boards and quit building when they were convinced the tube equipment was no good. They did not promote the idea that you needed good test equipment and encouraged the use of half-assed methods and procedures. When they did publish test equipment projects it was for the stuff you could buy cheaply, not for what you really needed that was expensive. They never published a frequency counter that was any good even though counters were high dollar relative to build cost until the 1990s.

Still, there's a lot of good data there. My favorite ARRL books are 1955, 1962, 1965 and 1976. The RSGB books from that timeframe are also excellent and the W6SAI book can be as well, but he was a poor editor.

I've seen them on ebay for under $2000 (it may have been Euros).

Dunno, and don't care, either.
It works, which is as much as one might expect from a Windows XP-based
thingy ;-)

I still prefer the sturdy old AP1, though.
I'm getting too old to get used to all new thingies they buy in order
to lower our profit taxes.............

I use an FT-840 and would like to add an external 6 meter transverter.
The problem is the FT-840 puts out about 10 watts at it's lowest power
setting. My transverter is designed for 5 watt input maximum.

Does anyone know how to adjust the radio for a reduced minimum power
output? What I was hoping was to reduce the minimum only and try to
keep the maximum output settings to 100w.

Hello to all,
thanks 4 reading. I'm Iz8ffc, in Rome, Italy.
I've to BUY my FIRST radio ! to use in 30% in portable mode, when i'm

out at sea or among mountains and 70% in my rig , at home !
I like these 2 radios, and i'm so in doubt about witch one i've to buy.

80% of my qso are in CW and i need a good receiver. ONLY a good
receiver.
Which one is the best ? Please help me !

I'm not interested at other bands such as VHF or UHF so 817 isn't in my
thoughs...
but several times om from around the world advice me the 817 because is
(in their opinion) the best in rx !

Here there are my question:
1) Is the tuner of 703 useful ? Tune EVERY antenna ? i know that will
not tune wire antenna..but little dipoles, strange antenna ? Or you
advice me to use my LDG z100 AUTOTUNER ?

2) Is the 703 very versatile , portable to use in a field ? Or is it
very complicated ?

3) Maybe i've to buy a 706 and i resolve all my doubts?

The three things because i don't want to buy 817:
1) It has a little display and doesn't have a DSP , and AUTOTUNER.

Mind you that i'm not interested at v and uhf!
SO: WHICH ONE DO YOU ADVICE ME ? THANK YOU A LOT

73 Joseph

Pete
Thanks for the tip on the ARM button now I'm getting closer to what I know...
Next I've got figure out what all the FFT is about.
Hank

By chance does anyone know the latest (last) firmware version for the NIR-12 DSP filter? Since this unit is out of production, I wonder if a newer firmware can be copied to a disk then burnt or flashed to a new ROM chip.

Any thoughts?

The Krooborg tries out its rusty old fact-by-assertion module.

> I looked at recent US eBay closings before I made my previouis post.

An obvious lie. Come back when you have something truthful to post.

FYI
I just got my eBay CD with the ops and service manual and first glance tells me that it has what I need. It's 202 pages and much more comprehensive than the Agilent download and has examples on how to use it.
Thanks to all who tried to help me.

If the thing under test is amenable to it, there's little
or no hope of improving on a PC soundcard and Matlab as a combo. Might
need a breadboard to adapt the signals, but if it's in range,
it'll outrun just about anything for the money.

You're assuming you can trust the test equipment. Sometimes,
you can't....

No Sal, You'd still be a retard. Doing ATV doesn't any require skill, and
it doesn't have it own test element either. A CB'er could go ATV, maybe
thats why you're good at it.

Come back after you learn CW to 20 wpm, and I'll pat you on the back and
say "Welcome to Ham radio, Well Done."

You need both to be a well balance operator. If you're willing and motivated enough to be able to learn and communicate with CW, you're also more likely to be motivated to advance yourself technically in other areas of radio as well. You won't be one of those unmotivated no-code appliance operators you hear on repeaters who spend their days kerchunking all the machines in the area.

I most certainly did not start it.  I'm the nicest person on usenet.

I'm here to help guide and motive people on how they can make themselves
better radio amateurs, unfortunately, some of those I'm trying to help
prefer to be stupid and lazy, and they flame people that try to help them
and they are down right rude. You can see the no-code license was a bad
idea, we need to require all hams pass a code test to bring intelligence
and civility back to ham radio and the repeaters.  I prefer getting the
code requirement back up to somewhere between 13 and 20 wpm for all hams.

Do shop somewhere else because if you shop at Walmart you're supporting
Fags.

Jim couldn't be me, he hasn't the backbone to support what's right. You and him will be the first ones complaining how bad the operators on the bands are after code is eliminated, and I won't be able to laugh about it because it will affect me too.

I realize that this is the wrong sort of "radio" newsgroup, but I cannot find any newsgroup dedicated to consumer AM/FM receivers. I figure you folks would have opinions on the relative merits of digital vs. analog tuners.

Which is better for pulling in a weak, distant radio station: a top-of-the-line analog tuner, or a digital tuner with quartz crystal oscillator, phase locked loop, etc.?

I am seeking a "good portable radio". None of the portables that I have owned have been able to pull in weak stations as well as my no-name car radio. Now, according to what I was told in some courses over a decade ago, I thought the "best" radio receivers used a quartz crystal local oscillator and phase locked loop to "lock on" to the received signal. However, the high end radios people have been refering me to (like the Tivoli Portable Audio Lab) have analog tuners. I have to admit that part of the charm of a digital tuner is the laziness it allows: key up 1340kHZ or 91.5MHz and you're there.

I doubt that my no-name car radio was expensive even when the car was new. There should be a portable radio out there that works at least as well. Any recommendations? It wouldn't necessarily have to have a speaker; headphones would be fine.

> Which is better for pulling in a weak, distant radio station: a top-of-the-line analog tuner, or a digital tuner with quartz crystal oscillator, phase locked loop, etc.?
>

Hi, Paul,

Believe it or not the best receivers seem still to be the old-fashioned analog tuners, partly because of an inherently lower phase noise level in analog tuners and partly because a couple of manufacturers have put some great engineering into putting out really good portables.

One is the GE Superadio which always gets great reviews everywhere, and the other is a little-known Radio Shack Chinese clone of the Superadio, their catalog #12-903, which I believe is a little bit more solidly built than the GE and closely approaches its performance.

Any portable with a jack for an external antenna is a plus because you can run a lot of wire outside an bring it in through a window. This is much better than even the large 8-inch ferrite rods in the GE and Radio Shack. (Both models have connectors for external long wire type antennas.)

My recommendation is to stay away from the Sony ICF-SW7600GR which a lot of people like because of its digital tuning and synchronous AM mode but I have one and there is no comparison between it and the RS 12-903, for example. It eats batteries like nobody's business and doesn't sound as good as the RS. One of the other big advantages of the GE and RS are their beautiful audio quality thanks to well-designed wide IF bandwidths and large speakers. And you can expect your batteries to last more than 200 hours!

Another word about synchronous AM: on the Sony mentioned above, it does help on a moderately noisy signal but it raises the phase noise even higher compared to normal AM mode. In addition, on the very weakest signals near the noise floor Synchronous AM isn't effective at all because it needs a minimum S/N ratio to work properly.

One last model that you may hear discussed is the CCRadio Plus. I wrote a review of it on Amazon.com which was later pulled for no apparent reason although some other folks claimed that the manufacturer had pressured amazon.com to reconsider any negative reviews of the product. Whatever happened, I had some solid engineering data in that review to support my opinion that it was a mediocre receiver, certainly not the stellar product that the ads claim.

Sorry for the extra long post. Good luck in your decision and enjoy AM DX'ing.

Regards,

Al W6LX

Selling my Palstar AT Auto, three months old, has Version 1.01, all accessories in factory box. Asking $955.00, shipped to mainland USA, or picked up 23323, $900.00 FIRM. It works well, but just didn't fit in my antenna systems to my satisfaction. 160 M using OCF, 75 & 40 M using G5RV/OCF/Loop, 20 M to 10 M using a MA5B beam, 6 M a 5 element beam. Pro3 & Pro2 through PW-1, RF generators.

Now using dedicated AT1500CV for 160, another dedicated AT1500CV 75/40 and the PW-1 auto tuner has little task into resonant beams on 20-10 and 6. Three antennas on 75/40 puts too much memory match on the software and a lot of computer interfacing without antenna data input. Beautiful tuner for a basic transceiver/amp/2 antennas station.

Is the GE Superadio III as good? (Sometimes the model name stays the
same, but later versions aren't the same product at all.)

I understand the merits of big antennas, but the whole idea of a portable
is that you can pick it up and take it to the office, lab, etc. without
having to get permission to string wires. Do these radios come with some
sort of default antenna (like the traditional telescoping chrome rod)?

Is there anything similar to the GE or Radio Shack that gets shortwave?
More to the point: In the middle of the continental US (Colorado), can
I pick up international news in English? Someone told me once that the
BBC was going to stop its shortwave broadcasts for the US because we
weren't offsetting the cost.

Shortwave wasn't part of my original interest, but I got curious after

```
one guy claimed that any shortwave radio has to be better quality than
a mass-market AM/FM radio.

Paul Ciszek (nospam@nospam.com) writes:
> I realize that this is the wrong sort of "radio" newsgroup, but I cannot find any newsgroup dedicated to consumer AM/FM receivers. I figure you folks would have opinions on the relative merits of digital vs. analog tuners.
>

rec.radio.shortwave is the proper group, it's intended for any distant listening of radio stations, not just shortwave. (THis isn't a retro-definition, it was there from the start and "shortwave" just seemed like the best way to name the group.)

You have to "define" best, when shopping for a radio. In a lot of consumer equipment, the radio sections are an afterthought, and certainly not intended for much beyond local stations. That's what most people are interested in, if they even care about radio, so there's no real incentive for manufacturers to design good radios. So if you ask for "best", it may turn out that the salesmen are thinking in terms of sound or some other function, when you are talking "radio that is good at receiving distant signals". And cost isn't necessarily a factor. Since an expensive stereo receiver may be sought after for sound and features, the cost may not be reflected in the radio. Of course, in the past, there were some very good stereo receivers with good reception qualities.

I once got into an argument with someone about their having a "good FM receiver" when it turned out to be a portable shortwave receiver that included FM. They thought since they'd paid a lot for it, the FM section is naturally good. But the FM section would not use any of the circuitry from shortwave section, so it was a "feature" added to sell more radios, and the designer likely wouldn't have allocated much to the FM section, since it would raise the cost or reduce the shortwaver performance.

Car radios have traditionally been good because of the environment they are operating in. One minute they could be near a radio station, and if they overload then that whipes out the other stations. The next, they could be way out in the middle of nowhere, where all the stations are distant. Or a combination, where you need to separate out a strong signal from a weaker signal. So car radios traditionally were designed better. An rf stage at the antenna, better selectivity in the intermediate frequency.

Meanwhile, other AM/FM radios have pretty much kept the same design for decades, with very little innovation unless you get a really expensive radio. And since the "standard" design doesn't take into consideration much beyond local stations, there's no incentive to change.

If this was for a non-portable use, the cheapest solution would be to buy a car radio at a garage sale for a few dollars, power it up with a power supply, and there you have it. A relatively decent redio for a few dollars. I've had a Delco digitally tuned radio next to my bed for a decade, and it's pretty much the best AM/FM radio I've had. Certainly on FM, it beats anything I've tried. (And if the need is semi-portable, get a speaker in a cabinet and strap the car radio to the top.)

Most people never tune the bands to try for those distant stations, so they don't get an idea of what might be better. Distant AM stations at night are easy to receive, sensitivity isn't usually an issue. But separating them out may require something better. On FM, distant stations often require good radio conditions, so no matter what the radio, you will need height to get a distant station on a regular basis. But an FM receiver's ability to stand up to strong signals is important, because too many low end radios (and the expensive units that don't spend much on the FM radio) overload from strong signals. You can never hear the weaker signals, even when they are receivable, because the local signals overload the receivers and mask the weak signals. But here again, better selectivity becomes important, so you can hear the distant station that's adjacent to a local and far stronger signal. (And in the past, when radio was more important, there were high end receivers that dealt with this, having two selectivity positions, one for normal reception and a narrower one for when a signal was weaker.)

Digitally tuned radios mean you are more likely to check those distant stations. Keep the local stations on the memories, and then tune around the band, knowing you can easily get back to the locals. Or when conditions are good, when you find a station pop it into a memory, so you can tune about while waiting for an identification on the first station. There are some FM stations here that are just over the horizon, and are receivable sporadically, and since I like the stations, I keep them in memory. It's really easy to check them, so I am more likely to check them. And digital readout makes it far easier to know what frequency the station is on (which helps to identifiy it's location.)

Analog tuning has the advantage that when trying to deal with a weak signal adjacent to a stronger signal, being able to tune around a bit can sometimes help to separate the stations. You don't have that ability with digital tuning. Again, some of the better stereo receivers in the past included some odd (and I have no idea how successful) designs that tried to compensate for this, trying to give the best of both worlds). Or things like shortwave receivers allow for finer tuning steps. They'd allow 1KHz steps on AM because that's needed for shortwave tuning and the AM section is usually part of the shortwave section. And if they include FM reception, they might have 50KHz steps instead of 200KHz steps, to accomodate different standards around the world, but which incidentally allows for finer tuning on FM.

One of the BEST things I have seen to improve AM radio reception is the
Select-a-Tenna (http://www.selectatenna.com/). Tune your portable radio
to the frequency, place the Select-a-Tenna next to the radio and adjust
the Select-a-Tenna for best reception. No wires to connect, no
batteries or power to plug in to. There are now other models of
Selectatenna that are powered or can connect with wires to you receiver
but I have been using one for years on a very inexpensive portable radio
and I can pick up stations loud and clear that I couldn't even hear
without it.

I am not affiliated with the company that makes them, nor do I sell
them. I just have one and am impressed with its performance.

Please note this is for the AM broadcast band only.

It sounds to me like you have it all covered. One extra thing you can do is just have it send random words for about four or five minutes, then people can check their copy with what was sent.

Also, make sure it can send code up to 20 to 25 wpm. Some people might want to practice to be real hams.

Pete
I saw it and got it several days ago but I sure can't make the thing work
like a spectrrum analyzer. And I know how to use a HP 141T and its plugins!
I don't think there's anything wrong with it as it behaves per the manual
Any other help appreciated. Perhaps someone has used one for music study as
I want to.

5 Radio Frequency Interference Ferrite (RFI) Reducers for Round Cables

Cut down on RFI (radio frequency interference) with this effective and easy to use clamp-type split ferrite choke core. Simply snap it over any coax cable, AC or audio cord.

Features/Specifications: Split ferrite RFI reducer for round cables
Clamp-type fitting
Uses high-performance ferrites (Nickel-Zinc) that reduce high frequency noise
Split ferrite assembly are fully enclosed in a Nylon case
Can be installed before or after product setup and assembly

Package Includes: RFI reducer for round cables

Product Requirements:
Suitable round cable

RFI filters can be pretty important when cables are run through big bundles of other cables or near strong power supplies. Put this RFI reducer on your round coax, AC, or audio cord to improve the signal quality. This Radio Frequency Interference Reducer is made with high-performance ferrites (Nickel-Zinc) to ensure a better filter process. It is small, only 1.2 inches long and snaps on in an instant.

Do any of you no-code lids remember the demonstration on Late night TV
when a couple of CW ops demonstrated and proved CW is MUCH faster than
"text messaging?"  Yeah, it';s slow if you are a 5 WPM lid that has no
pride in themselves, but for REAL Hams it is efficient, and fast.

Why are these no-code idiots so DEFENSIVE? They're winning! What have these morons got to have an attitude about? It's us REAL HAMS...us CW operators that should be slinging the mud. All they have to do is be conceived, then try to figger out how to push the mike button now and...voila...they're so-called "hams." And the puff bags in Washington and Newington have handed them all the spectrum to use for their CB operations.

SLOW CODE...keep at it. I think your comments are right on the mark.

When you real hams, sitting on your fat asses come out of your musty shacks
and use your superior skills to help out your neighbors during local
emergencies I'll have some respect for you.
Join an ARES or RACES group.. or even a Skywarn net.
Until then you are just a waste of bandwidth and good potato chips.

Hi Hank,

This unit should operate like any other spectrum analyzer. Make sure that
you have it for recursive operation. This button is just above the "ARM"
button.
It took me a little while to figure mine out too.

Pete

Send your spec to these guys, they should be able to help you or at least
tell you whether it can be done. I hope you can afford their products.
Their tunable notch filters are very nice and might be one way of avoiding
a custom design, though I don't know if they cover your frequency.

10 signals are obsolete and are being officially dropped by most police departments in favor of plain English. The announcement has been all over CNN and FNN. Apparently, police professional organizations and Homeland Security have recommended that 10 codes be dropped, and most police departments are about to comply.

The use of 10 codes will now be the offical mark of a backward operator, just as we have always known.

They don't like to be reminded about that contest. It shows the difference between skilled and un-skilled. It also gets back to that liberal political correctness thing. Everyone has to be equal, since not everyone is good enough to rise to the top, they got to drag the top down.

SC

I'm not certain to which group I should post this question, so I'm shot gunning hoping to find it. If anyone can point me, please do. However....

Has anyone used the HP 3582A audio spectrum analyzer to plot the freq response of audio devices like mikes, speakers, etc. Knowing the mike response I'd like to see the spectrum of plucked guitar strings and their harmonics and see how different manufacturers sound varies in a plot. I got a 3582A at a swap meet, its complex and probably overkill but that's what I have and I am anxious to try it out and would appreciate any tips.
Thanks

If you mix the 455 kHz output to 10.7 MHz, you could use the AOR display.

Well, I'm excited about learning code. I have been given some great

websites for practice. And I'm going to try to test in January 2007.
I don't know if I can be ready that quick - but I'm going to give it a
shot. Also, I have been encouraged by several hams to learn the
sounds as complete thoughts instead of learning just letter
recognition. A bit like learning to read, I guess - so I will try that
method. Thanks for the hints.

The 3582A is just one of many two-channel FFT analyzers which can be used
to measure the frequency response of a system (output re input). What
specifically is your question? Perhaps all you need is to get an operating
manual and learn how to use it?

However, it is often a good choice for the person who has never used contest
software before due to its intuitive interface.  All the other software that
I have experimented with takes time to get familiar with.

I'm using the AVCOM SDM-42B display with my RX-340...to use this unit you have to have the accessory 45 MHz IF unit installed which then interfaces with the 1st wideband mixer output at 45.455 MHz. I THINK the low end of the chain at 455 Khz may not be wide enough to give you a decent display width. Usually run the display with a width of about 100 KHz which lets you see lots of signals (and some birdies too unfortunately). AVCOM has software that when connected to the SDM will display the same info on your PC. The software was originally intended for their spectrum analyzers so many of the measurement functions do not operate with the SDM. I/O is thru a serial port--they used to have an accessory adapter that interfaced via the PC's parallel printer port but I could never get it to work until they upgraded my unit to a serial I/O. The communication with the PC is only one-way so you couldn't control the RX-340 with this unit even if you wanted to.

Be advised the unit is pricey (even after they significantly reduced it a year or so ago) and support for that unit is VERY low on the company's totem pole of products....but it sure is nice to be able to see the band.

As far as I know this is the only hardware spectrum display unit you can use with the RX-340. The AOR units have only 10.7 MHz inputs. BTW, with the 45 MHz converter installed you retain the use of a second channel at 10.7 MHz for another receiver -- I've got the Icom R7100 hooked to that port so the SDM-42B supports both radios.

Check out the specifications of a new receiver coming in January from RF Space: www.rfspace.com/sdriq.html

A feature of this new receiver is the ability to serve as a panadapter display for other receivers via any IF frequency within the HF range (455 kHz qualifies). I'm thinking of getting one for the 190 kHz RF recording capability, so I don't tie up my SDR-1000 while DXing. The SDR-1000 needs to be left on a single frequency while recording a swath of RF.

The SDR-IQ's price is $449 (receiver, software, no enclosure), and $499 (receiver, software, plus enclosure).

73,

Guy Atkins

Another option, FWIW, is to use the PC to capture and analyze. The audible spectrum would seem to be quite unchallenging for common desktops. Compression schemes such as MP3 and WMA, after all, operate on the frequency domain. In fact, Windows Media Player delivers the FFT stream to visualization modules. There's likely free software somewhere that can do what you're looking to do. OTOH, you then have the soundcard's non-linearities to deal with, which is likely not on par with lab or even studio grade equipment.

There are studio grade PC audio interfaces, and some are among the
highest-performing audio components around. Some are on a par with  the very
best lab equipment.

There is free PC software called RMAA that will automatically conduct a
representative suite of audio tests, and produce reports in a few minutes:

Yes, lots of people have used HP FFT analyzers for all kinds of things.
There isn't a lot of trickery... they pretty much work.

One thing which you can do with these older analyzers is measure much higher voltages than possible on a sound card FFT, much lower frequencies -- they were used for vibration analysis as well as audio -- they are also very well isolated -- you can find a repro of the manual on EBay for ten bucks.

Easy enough to address. I use a 5K RN50 potentiomenter for the purpose. If I want an accurate voltage measurement of audio, I use a voltmeter.

> much lower frequencies -- they were used for
> vibration analysis as well as audio

Not much difference between most vibrations and what a subwoofer does. If an audio interface is flat within 0.1 dB at 20 Hz, then it is pretty good an octave or two below that!

> -- they are also very well isolated

There is this amazingly good audio isolation transformer at Radio Shack. Sells for under $20 a pair...

> -- you can find a repro of the manual on EBay for ten bucks.

You can find an audio interface that will outperform say a HP 334 for $30. For $200 you're in the same league as some of the older, but not all that old AP stuff.

I just joined this group, thinking I would get in on quality radio discussions. I didn't realize I had mistakenly joined a bunch of juvenile males interested in only out-dissing each other . Are any of you serious about radio?

Very few, it seems. It's just (yet) another originally interesting n.g. gone to
the dogs...
Well, that's what you (we) get from non-moderated groups...

Which group is "this group"? You cross-posted to
three other groups.

well thats WHERE the problem lies, if the retards would keep the thread in
```

```
the Ham Radio NG things would be fine. After reading ( a few of) the
messages, it makes me wish ham radio would die out. They complain about
'qual;ity' operators and CB'ers but then they get
here and act worse that the worst. And yes I'm cross posting this message so
that ALL the
ham radio retards can see it, with the hopes  ( but it seems these shit
stains have NO CONSIDERATION for other people ) will STOP cross posting to
NG's that have no
bearing on their 'debates'

Quite a few of us are but we have been invaded by the idiot squad lately. A carefully made kill file will solve the problem and make the newsgroup much nicer. I have a friend who is writing a patch fpr IE that will allow you to kill entire threads according to whom initates it. I will make it available as soon as I get it. Most of the juvenille behavior is a result of those with no true interest in amateur radio, they just want to stir the pot and be heard kind of like those who yell obscenities on the air just to hear peolpe respond.

I am.

The FCC just posted the newest restructuring in the Federal Register.

and I still don't think Woger knows the material on the test.

At least N0VFP and N9OGL don't get into bad moods and try to destroy the newsgroups when they fail.   Woger can learn something from them, but he's chooses Markie for his mentor.   It must be a gay thing.

No, No, No, You are all Heathens!!!!

I know the Bible. I read it every Friggen day while I listen to Code. My
favorite Bible passage is an End-Times passage and I'm actually mentioned
in it. It's found in First Hiram Chapter 2, verse 73:

"and Slow Code, servant of the Lord, smote the Lids with his
cattle prod and the Lids were healed. All that saw were
amazed and fell to the floor and gave thanks to Slow Code
and the bands were made clean that day, and many CB'ers were
also converted. And they began preaching and speaking in CW"

Good luck with it. :) We love helping people that want to good hams get a license. That's a good point on learning CW. As you get better and faster at it, you don't hear individual letters, you hear and your mind memorizes the sound of whole words.

Markie will probably flame you for wanting to learn CW, but just ignore Markie, he's a retard.

I found this in the swap group.  All you good hams might want to
subscribe, the rest of you like Markie, Ham-and-Cheese, and U-Know-Who
will probably try to crap on it.

I can't believe a ham would ask this question. Everyone complains about having to learn CW, that they want to modernize and shouldn't have to learn it, but when they hear a more modern mode that they should know what it is, they don't know it.

It's just like I said, Hams just want an easy license they don't care to modernize. If they did care they would be modernizing. Radio teletype has been around a long time, if they're too lazy to do CW, why aren't they doing teletype.

If we still had a real CW test, people would study theory more and know what they're hearing. But Nooooo, we can't have real radio tests.

You shouldn't do things like that, the FCC will come after you like they
went after old Two-Test.

I bought a spectrum analyzer at a hamfest that I use as a panadapter for my RX340. Usually it is connected to the first IF (45.445 MHz), and I use a broadband amplifier to bring the very low-level signal up so the spectrum analyzer can use it.

I haven't found the other IF outs to be all that useful for a panadapter.

BTW, I paid about $200 for the spectrum analyzer -- it's not all that
expensive a way to go.

Sorry I mispoke earlier. Let me restate this. Hyperlink has an 8pole filter for several of the 802.11b channels that has the mask -3db at +-10Mhz, -5db at +-15Mhz, -20dB +- 20Mhz.

Essentially I want to keep 2.417 to 2.437 Ghz, so one of their filters centered at 802.11b, channel 4 would be ideal, except that they only sell centered at the standard channels (channel 3 and 6 are the closest), so in short I was wondering if anyone knows of a vendor that sells such a filter centered at 2.427Ghz. Thanks for any suggestions.

That looks like you'd have to call them for a custom version which will
probably be lots of $$. Or roll your own which requires a lot of
RF/microwave knowledge. Or hire a consultant :-)

Problem is, if you are most likely the only one needing this there won't
be an existing market and chances that any other company has the right
product could be close to zilch.

Regarding the "education". They teach "some" college level prep classes. As to those with lesser ambition/grades, they have "classes" - period. There is "Vo Tech" - but you had to have a certain grade average to get in "there". As to shop, one school I know of - sold all their shop equipment years ago - that being the same school "I" went to and got my start in electronics training. I've never heard much of other schools having "shop" class around here. The "stadiums" at some of these schools here reach into the "millions" of dollars, upping the taxes on all who live there. Those stadiums are damned close to being equivalent to a "Pro" Field. Hell, our local "state" University doesn't even match some of them. That is pathetic. Yes, kids need sports to teach sportsmanship and competition, but come on - "EDUCATION" being "reading, writing, arithmatic" and so on are more important. AND as I said, they fight for school board seats hotter than some local and state government races. It is "sickening".

They've eliminated the "Wood, Electronics, Metal (including welding) and

Electrical" shops here. Now, I realize "Electronics" may not be as hot to some as it once was, but it still has value in our country. So too does "Electrical" systems/wiring, "Welding", etc. Do we not need "skilled" labor anymore? No wonder this country is going to hell. Pretty soon all other countries will out smart us in every field. Those who were pushing "no child left behind" - need to get things back on track for "develpment" of "marketable" skills."
We're still going to need things wired, welded, soldered, electronics to mainain the "cell phone craze" and so on.

I realize most parents are working and unlike the past - at least one parent made sure we did our chores, studying and so on..... things have changed dramatically. They need to change dramatically again. Get these kids interested in something. Even computers seem to be falling out of grace with a lot of them - aside from chatting. I guess they equate computers to "work".

I just bought an MTS2000 radio (VHF 48 Ch. - H01KDD9PW1BN) and am wondering if the scan list can be user programmable.

When I brought it to Motorola for programming, they told me I had to provide them with the scan list for each bank because it was NOT user programmable, however the information on the following links shows otherwise.

http://www.montcopa.org/eoc/EDS/RadioSystem/Training/MTS-2000%20Program%20Scan.pdf

Any thoughts?

Thanks!!

Hi, I have a VX-150 that's 1 month old. It periodically resets it's memory.
Initially I thought it was to do with the power in my truck.

However this is not the case. It has done it even without the power connected.

Anyone have Ideas?
K0BAZ

The most user friendly program is at www.n3fjp.com
It's a great program, user friendly (don't even really need to read the help
files to get started), automatically checks for duplicates, allows

monitoring the online DX clusters if you are so inclined, allows rig control if you are so inclined, allows keying the radio from the computer if you are so inclined, creates Cabrillo files for contest submission and adif files for importing into general logging programs. There's other neat features but that's a good start. It is also quite inexpensive.

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.

Right, That why there is CB. You don't have to know how it works you just get on it and act stupid. We can't have ham radio be like that, we want skill. Quality, not quantity.

I know a lot of you don't like that because it means more work, but we get a higher quality operator.

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.
///////////////////////////////////

Hmmmmmmmmm

Not unlike what Katie Couric and Matt Lauer do on a daily basis. Or, for
that matter, what CBS, NBC, ABC, and CNN do daily.
When a Republican goes awry, the Media plasters it on Page One. When a
drunken Democrat does so, the Media lauds the Democrat for "getting help"
and calls it a "Courageous Step."
Chappaquiddick, anybody?  Mary Jo Kopechne ring any bells?
Now, when it comes to "picking up a turd by the clean end", which end would
that put Senator Kennedy on?
```

N1MM's LOGGER program... Can be used as a simple logging program.. But
has all the bells-n-whistles you can imagine (and some you can't) if
you want to use all its features... Has a community of users who will
help you and a chat group...
And is free - not shareware, or pay me later - f r e e .... Go to:

http://groups.yahoo.com/group/N1MMLogger/

enjoy - denny / k8do
<who has used most of the logging / rig control, programs out there, is
a life time subscriber to TRLOG, CT. and others, and N1MM is among the
best...

XPost & Fup to rec.radio.amateur.misc.

My first choice (for single OP, unassisted): CT(Win) by K1EA,
available at http://www.k1ea.com/. It's free, easy to use and
offers all features you'll need to get started. Saves the log in
Cabrillo format, export to ADIF possible to import it into your
general purpose logging program.
CT is one of the most used contest loggers for many years now,
for a good reason.

More advanced: Win-Test (http://www.win-test.com/). Not free, but
worth the price, if you need the rich features it offers.
Especially great networking capabilities for multi-operator
environments (probably not important in your case), good SO2R
support etc.

Other free Contest loggers: N1MM (Mentioned in another post. It
works fine, but it's a bit too bloated for my taste.), SD
(http://www.ei5di.com/ similar to CT).

Hope to meet you in CQWW, I'll be Single OP Allband High Power
with SO2R (using good old CT).

73,

I agree that N1MM is very good. For a beginner in computer logging of contests, it has a steeper learning curve than the N3FJP programs. While you do have to purchase the N3FJP program, it is so easy and intuitive to use that it is great for the inexperienced. I will admit N3FJP doesn't have quite as many features but it does do all the basic stuff (basic rig control, dxspot access, etc). Again that makes it good for contest beginners.

Here is my list of preferred contest logging programs in order:

1. N3FJP if he has one for the particular contest.
2. N1MM when there is not an N3FJP program available
3. GENLOG when neither of the above has a program or module for the contest.

Dee, N8UZE

Hey man, thanks for the great idea! :)

I can hook ladder line to my cattle prod and clear out a whole row of
no-coders in one shot. Empty seats for all 20wpm code tested Extra's in
seconds.

You know, sometimes you're a smart little piss-ant. Not often, but
sometimes. How's your CW practice coming along?

Get used to the QRM, because after CW is eliminated you're going to wish
your rig did come with Rettysnitch and wouff hong filters...

But I forget, due to the lack of support for good tests a lot of you
people must like hearing Lids.

SC

give the yaesu tech's a call maybe they can walk you thru something

try a master reset on the radio

i had a ht (not yaesu) that did that it was the little battery inside
not makeing good contact

hope this helps at least a tiny bit

I like this thinking. Since I have both a 20WPM Extra AND a 2nd Class
Commercial Radiotelegraph, I would expect the no-coders to bring me food
and drink, as well.

Hello!
I want to buy a new handheld. I was reading the reviews and user opinions for the last few days, and I still can't decide which one is the ONE. Please if you could help me. I know that both(F7E and VX7) have very good 2m/70cm TRX. I don't really need 6m. But I can't find which is better in other (ham and non-ham) bands? Which has better quality build, sound, hardware, software...? Reeception in bad conditions?etc.
As I can see both are "old" models(from cca 2001-2002). Are there plans for newer models from Kenwood and Yaesu soon?

Thank you

73

That IS correct, the SCAN can be set for user programmable or programmed scan list.

I use the rotory switch for Talkaround, DIRECT, and one of the side push buttons to enable SCAN and with a long press goes into scan programming using the "delete" button.

Good point, Yes, very good point.

No-coders must go to the end of the line for refreshments at meetings. Code hams must be served first and should take more treats than they want and need. When all the code hams are served and there is nothing left, no-codes get the left-over Coffee grounds and Cookie crumbs. This will teach no-codes that by working harder to be better hams, they will not only get more radio spectrum, they'll also get treats at club meetings and won't have to sit on the floor with an empty stomach.

No-codes can still dig their treats out of garbage cans and toilet bowls if they wish, but they'll have to share them with any CB'ers that might also be at the meeting.

SC

Moses tried to lead people out of Egypt, and I'm trying to lead people out of Lid-ville. And also like Moses, I'm finding some don't want to leave.   They think it's too much work to leave Lid-ville.

Well sure it's work, but look at the benefits, Quality hams.

SC

You're nothing like Moses - you worship a false god.

You're more like the King who cut the baby in half.

1)  The king (Soloman) never cut the baby in half. He directed it be done in
order to find which of the two women's baby it really was (the real mother
opted to give it to the other woman to save it's life.. so Soloman gave it
to the real mother.)

2) Soloman was widely (and is still) revered as the wisest of kings.

There's a downside to the N3JFP logger Dee - the country files
(CTY.DAT) are only irregularly updated and I haven't found a way to
update them before each contest via AD1C's service.

In the case of Slow Code, he actually intends to cut the baby in half.

> 2) Soloman was widely (and is still) revered as the wisest of kings.

In that sense, he greatly differs from Slow Code.

Have a quantity of Radio Communications Service Manuals, both Commercial &
Amateur that I have rescued from the Dumpster. Most ot them are in Like New
Condition.

Please check my site: www.rodemi.com   for what is available. I am
updating the site as time allows.
I recently retired from the Commercial 2-way radio business

Thanks for looking....Norm VE3CZI

Is there a stand-alone, or PC software-based, RF spectrum display that
can interface with the 455khz IF output of a Ten-Tec RX340? I don't
really want PC control of the RX340, just a spectrum display. Thanks.

Wouff Hong ???
Rettysnitch ???
WTF are we in the 19th Century here???
Baaaaaaaaa hahahahhahahahahhahaha!!!!!!!

Jeezus H Christmas on a rocket powered sled at the Nevada test site
will you OBSOLETE hams PLEASE join the 21st century.

I mean consider that the terms Wouff Hong and Rettysnitch
DO NOT even appear ANYPLACE on or within Wikipedia!

That alone should tell you something! (..of course now you
can be some crusty old fart, cloistered ham radio nerd or
some asshole who took the "Bash Book" route to get his ham
license will now dash up and create an entry in Wikipaeda
just to inflate his own ego and asscheeks and claim he did
something.....go ahead, be my guest! In the meantime I'm
heading back to 20 Meters to have some fun with the contest
freaks. I made up a callsign and semi-rare section and these
CLOWN-testers are beating a path to my speaker to work me
just so they can see their callsign in print in some half-ass
magazine from CT.   How F-N pathetic!) ---> PFHBLTTT!!!!!!!!

ps: you should have seen how many DX clowntesters I duped
a few weeks ago using a "creative" callsign, section and running
10 watts into the 40M dipole instead of the beam...suckers!

I don't think this is likely since you would need an A/D samping around
a megahertz, which isn't stock hardware on a PC. There are SDRs that
will give you a panoramic display on your PC.

You'd best watch yourself, k00k. That kind of word isn't for any of your
sort to utter. You may have only won the Golden Killfile, but it's still
a kook award.

Hail Eris!
Demon Prince of Absurdity

"And no, I did not have sex with my son. But if I did I certainly
wouldn't tell you. Something so beautiful and precious should be kept
private." -- Kathy L. Mosesian, or possibly not really her, confesses
she may be a liar and committer of incest with her own son, in MID:
<cfcd3f4660694e3afeaadaa2723e9ab1@msgid.frell.theremailer.net>

The reporter asked Colin Powell (or George Bush), "What proof do you
```

have that Iraq has weapons of mass destruction?"
He replied, "We kept the receipts." -- Bill Hicks

"They thought I was fair game. I was an instrument of purpose to achieve
their desires and not 100 percent real and ALSO that they had me by the
short curlies because I thought that the world revolved around them and
therefore I think that I am fair game and rightly so. If they want to
play dirty, I get to too. It's not a one-way street. I will use the
physcial strength that I have over them, my superior 5'7-3/4" height
advantage, the boxing moves I paid to learn, the suprise of pussyfooting
up to them with their back to me in a public place 18 1/2 years after
the fact and thus not only do will they not know that I am but a pica's
distance away from them, but that I even exist on earth." -- Chris Tsao
is secretly John Wentzky's psychic twin. MID:
<1161246083.152300.195760@m73g2000cwd.googlegroups.com>

Looney Maroon nominee for August 2006 Johnny D Wentzky foamed:
"You never asked someone who goes into areas of the internet that are
only for adults who has an underage id somehow or another if they are a
cop posing as an underage person online?
I guess lots of people just don't watch dateline or read stories much.
Why don;t you go to pervertedjustice,com and see what they do. They are
awash in their self-proclaimed glory after they lied to membners of the
public.
They are awash in their self-proclaimed glory after they posed as an
underage person and agreed to do all sorts of sex acts wioth adult
males, and they are adults posing as teenager themselves. They make
themsleves into liars by falsely impersonating underage persons and by
not fuilfilling the words they tell the victims online in their chats.
Why don't you read it where they tell these victims of their deceit
about how they have been with grown men and such? Why don't you read it
where they say, "That would be cool." after someone makes an advance
towards an adult who is posing as a teenager? And, where they agree to
meet the person, etc.
Lost control, didn't you?
Is that why you feel as if you need to lie so much now? I see where lots
of these false impersonation games are not sticking. They feel as if
they can lie and then order the victims to get counseling in the
gayblade, governmental, pro-choice tax leech counseling centers. They
are doing nothing more than usury and fraud in many cases." -- Wentzky
almost comes out of the closet as a pedo/ephebophile in MID:

Hello All,

I am looking for any info relating to the Motorola TTE1752A, which is basically an RF amplifier on UHF freqs around 450-500MHz (I think!).

There is next to nothing coming up in Google, apart from the following: "
Re: [Repeater-Builder] Repeater Amp - TTE1752A

mch
Sat, 08 Nov 2003 22:10:02 -0800

Since I don't think you've received any specifics on this yet, I'll give you an educated guess... UHF 100W. I say UHF because the 'E' in TTE, if it follows the Motorola standard nomenclature, means UHF. I am not so sure about the 100W, but at least it gives you some idea.

Generally speaking...
A = Below 30 MHz
B = VHF Low Band (30-50 MHz)
C = Mid band (72-76 MHz)
D = VHF High Band (150-174 MHz)

E = UHF (406-512 MHz)
F = 800/900 MHz

Could it be out of an MSR2000? I don't have any manuals here at home or I might be able to tell you more.

Joe M.

Thanks in advance for any help,

Regards,

Do you go by little-piss-ant on CB too?

Really, CB is a dead-end street, if you want to process further than the
rules allow, you have to be illegal. On ham radio you can do lots of
things legally.  Learn CW, make something of your self. Don't be a loser
all your life.

I'm resurrecting an HW-16 that I picked up at a swap meet last month. I've gotten it working, aligned it per the manual, and the tubes are all good. Output power is about 45 Watts on 40m and 80m, and about 30 Watts on 15m, about what I expected. I do have some questions for you HW-16 experts to ponder:

(1) The receiver is the most sensitive in the middle of the VFO range, and the sensitivity falls off a lot toward the ends of the VFO travel, regardless of where I have it tuned when I do the alignment. All of the alignment adjustments work like the manual says they should. Any ideas on what might be wrong? I've owned HW-16s in the past and I don't recall this being the case with them (poor memory?).

(2) How would I change the audio frequency of the neon reflex sidetone oscillator? 1 KHz is too high for me. I'd prefer something around 750 Hz or so.

(3) The transmitter is chirpy. I know, all HW-16's are chirpy. I found a mod on line which suggests adding a 220 pF mica cap from the screen grid of the oscillator tube to ground to combat the chirp. I tried it, and I find that if I add capacitance there, the oscillator gets extremely sluggish. I tried various values from 100 pF to about 250 pF. Any thoughts on this?

(4) How can I increase the level of the spotting signal that's heard in the receiver? If I could bring it up high enough, I'd consider disabling the harsh sidetone oscillator and just listen to the transmitted signal as my sidetone, which is what I do with my homebrew tube transmitters and Drake 2B receiver.

Your thoughts on any of this would be appreciated.

Thanks and 73,
Dean K5DH

More than one k00k has gone on to win multiple awards after winning the GK, and look up "Edmond Wollmann", "Raymond Karczewski", "Richard Bullis", and "Richard M(orton) Scoville" for examples of what it can mean to win them. Usenet is not intrinsically "real life", but if you insist on making it that way, it will only be so for you. Mind you, in a group full of real-lifing stalkers, I suppose it's real for all of you.

"Q: What do you call someone in the White House who is honest, caring, and well-read?
A: A tourist." -- Anonymous

"It would be offly hard for any of you to abuse me on usenet. Really. I have the advantage. I could easily turn alt.usenet.kooks into a cesspool of encoded posts. Bringing the noise ratio up so high as to make the group worthless. Anybody who can code could do this, why nobody has bothered before now is beyond me. The ultimate spamming engine.. 'BAWAHAHA'" -- Dustbin "Outer Filth" K00k's delusions of grandeur reached new heights, in Message-ID: <Xns98355D29419B9HHI2948AJD832@69.28.186.121>
"Immorality: The morality of those who are having a better time." -- H. L. Mencken

"Consider that language a moment. 'Purposefully and materially supported hostilities against the United States' is in the eye of the beholder, and this administration has proven itself to be astonishingly impatient with criticism of any kind. The broad powers given to Bush by this legislation allow him to capture, indefinitely detain, and refuse a hearing to any American citizen who speaks out against Iraq or any other part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the

president's polls at an historic low, growing resistance to the war Iraq,
and the Democrats likely to take back the Congress in mid-term elections,
the Bush administration is on the ropes. And so it is particularly
worrying that President Bush has seen fit, at this juncture to, in effect,
declare himself dictator." -- Frank Morales
http://www.uruknet.biz/?p=m27769&hd=0&size=1&l=e&fark

"No man in History, including JESUS CHRIST, has directly revealed to
the World the SATANIC WEAPON used to enslave mankind -- INTELLECTUAL
THOUGHT!!" -- Ray Karczewski repeatedly proves his words in every post

Anyone wanting to trade? I have several registerable (not-stolen) hand
guns.

Roger, I sent an email but would like to thank you here,
also, just in case you don't get the email. This info is
exactly what I needed--and didn't find in my quick google
search last week. I tried AD5X's version--it took about
ten minutes, all told, and when I was done the 706 once
again tunes up just perfectly on 15. THANKS, Roger!

I was noodling around with my HD-1410 keyer while tuning up my Eico 720. Then the AC power had a brownout, and a bright orange flash and loud pop came out of the keyer. Opening it up reveals that Q7 is now a bunch of little pieces of burnt plastic. The keyer beeps the internal sidetone but now no longer keys the transmitter.

About a quarter century ago when I built the keyer, I remember something similar happening (except I think it failed shorted), and I seem to recall that Q7 is just a NPN maybe HV transistor, probably something like a MSA42. Can someone confirm this?

Tim.

Ken,

Thanks for the update. Its always nice to know when something works out. Phil (AD5X) has a good site - you can find lots of good stuff there.

Roger

> I used to really enjoy the ARRL handbook. I used to purchase a new one every so often here in Australia. I think the best valve ones were in the late 80's and then naturally it slowly evolved to semiconductors, integrated circuits and printed circuit boards and more sophistacted circuits etc.

Just took a look - I've still got a 1977 issue. Threw out the earlier ones when I moved around the countryside (RAAF Bases Amberley, Edinburgh, Garbutt, Laverton (now some other name), not in any particular order)

> I think the old days of truly making your own receiver and or transmitter are allmost gone.

I agree

>
> I have become old any eyesight is now growing dim! <snip>

Well, eyesight's not dim, but I can't read without specs anymore

> I still enjoying reading them in bed.

I can't do that anymore - book's too heavy, and my eyes get bloodshot.
BTW, I still have William Orr's 1978 'Radio Handbook' as well. That's
also good for a read occasionally, as well

Tim-

According to a diagram I found of the HD-1410, Q7 is a Heath 417-294. This crosses to an MPSA42 Motorola transistor, per the cross reference at http://www.d8apro.com/heath3.htm with specs shown as NPN, 300V, 500mA, TO-92, 50 MHz.

Be sure to check Q6 (also a 417-294) and D5 (57-27, 1N2071).

73,
Fred

His disability isn't that he can't write since he is dyslexic, but
rather that he doesn't think and figures that if he argues with the
other trolls, that something will changes.

The definition of insanity...to do the same thing over and over again,
but expect different results.

I know what you're both saying is true. Since ham radio has been dumbed down I'm hearing a lot more Lids, Kids, and space cadets on the ham bands too and radio's don't come with Lid filters. We need to keep CW and increase the speed requirement to somewhere 13 and 20 wpm. We can't risk dumbing down the service further.

Tnx, 73, Good luck in the contest.

No matter what facet of radio you enjoy, the topic is to protect it by improving the quality of the hobbiests involved. That's why most will agree if you know morse code, you'll be a better skilled hobbiest and will improve your nich of the hobby and/or radio service you're involved with. A valuable knowledge base for those of coming into the services and hobby.

Tnx, 73 Good luck in the contest.

Can't happen because it's not P.C. (politically correct). Would you want to be guilty of discrimination against retarded CBers?   Hell no! So chill, dude.

HJ

> I have it tuned when I do the alignment. All of the
> alignment adjustments work like the manual says they
> should. Any ideas on what might be wrong? I've owned
> HW-16s in the past and I don't recall this being the
> case with them (poor memory?).

No your memory is correct - I am making the assumption you have noticed this on all bands. More than likely one of the 3595 khz xtals in the xtal filter has changed activity level - let's try bypassing it - run a wire between C65 and the point at C66/R39. You should get a much wider IF sig now. Now check your sensitivity at both ends of the dial.

> (2) How would I change the audio frequency of the neon
> reflex sidetone oscillator? 1 KHz is too high for me.
> I'd prefer something around 750 Hz or so.

You can try changing R64 1.5M to 5M. Remember T=RC so a lower resistance value should lower the osc freq. You might want to put a pot to adjust freq. To decrease volume increase resistance R63 - try a 1K to start.

> (3) The transmitter is chirpy. I know, all HW-16's are
> chirpy. I found a mod on line which suggests adding a
> 220 pF mica cap from the screen grid of the oscillator
> tube to ground to combat the chirp. I tried it, and I
> find that if I add capacitance there, the oscillator
> gets extremely sluggish. I tried various values from
> 100 pF to about 250 pF. Any thoughts on this?

Yea this mod has been a around a long time. It's really for lazy hams that don't know no better. Chirp is caused by B+ instability (I.E. Voltage drops when hit the key - No Volt regulation) sooooo look at the skezmatic - see how the ENTIRE transmitter's B+ is tied to Point B (310 VDC). Whose brilliant idea was this ?!?!?!

First thing to do is ISOLATE the oscillator V7. Disconnect the wire coming from C4/R3/R4 to Point B buss. Tie this wire to Pont A in the power supply.

Skezzzzmatic shows that this is the B+ supply for the receiver. It only provides only +175 VDC but it's more than enough for V7 to oscillate cleanly at only a slightly reduced level.

The Point A voltage is actually pretty stable when transmitting. Because the 700 VDC voltage drop from R207/R206 and R203 to 175 VDC that voltage changes very little at this point.

Doing this mod will make the HW-16 sound like a Kenwood/Yaesu/Icom on CW.

If you want to make it sound like a Ten Tec - place an OB2 volt regulator inline with the B+ power wire. OB2 will take the voltage down to 125 vdc but it will be rock solid. V7 Oscillator will be a pure T9er. OB2 is a gas tube so its cold - solder a wire to input pin and output pin and stick the whole thing inside a shrink tube. you can then place it underneath the chassis... or you could punch a hole and put a tube socket near V7.

> (4) How can I increase the level of the spotting signal
> that's heard in the receiver? If I could bring it up
> high enough, I'd consider disabling the harsh sidetone
> oscillator and just listen to the transmitted signal as
> my sidetone, which is what I do with my homebrew tube
> transmitters and Drake 2B receiver.

Side tone level comes from Bias Switch Q1 which does not quite switch OFF the receiver - R49 10K - try a 10k trim pot and adjust level to your liking.

> Your thoughts on any of this would be appreciated.

No thoughts - I've done these mods.... and have many more...

Spot Button - One thing I REALLY hate about the '16 is the fact your have to key up the transmitter to find out where the heck you are on the receiver dial. This is what is called QRM - which in CW stands for interference - This reflects on a really piss poor HFE (Human Factors Engineering) sooooo...

How about mounting a DPDT push button switch. One Pole would be used to key up the transmitter from the key jack. The other Pole would be connected between C7 and PIN 9 on the V8 DRIVER. Now when you push the SPOT switch - it keys up the transmitter and also disconnects the input into the DRIVER/PA so it doesn't go out over the air. You will find that lil oscillator is plenty strong Side Tone and the rest of us don't have to hear you "trying to find yourself"

RF Power - Pretty crappy power control. You adjust the RF power by varying the B+ into the V9 PA. Pretty damn STOOOPID design - Here is a better way....

Disconnect and tie the wires from points 2 and 3 of the R13 Power Level POT point together. Now the V9 PA will be going at FULL BLAST at all times.

Now disconnect the wire from B buss to R6. Wire B buss to Point 3 of the

Power Level Pot. Shot a wire from Point 2 of the power level pot to R6.

You have just duplicated the same circuit but attached it to the IPA. Now you can go from full power down to about 2 or 3 watts. If you increase R14 you can get it down into the Milliwatt range and still go up to full power with a twist of a knob. YEEEHAAA - HW-16 makes a great QRP rig!

Have fun and don't worry about screwing it - wadda going to loose $20-50 ???

Got a HG-10B VFO ?? Remove one rear plate on STATOR (Fixed) of the variable cap. A slight trim adjustment and your HG-10B Now has a expanded CW band. Yes you loose the top end of the ham band and you have to do more "cranking" to move around from end to end - but it's more accurately set and is more frequency stable.

You know, CW may be obsolete, but having to learn the code instilled a bit of discipline and sense of purpose in getting a ham license. Of course things like mathematics, science and such that require mental discipline are no longer politically correct so are generally not required in education today because we certainly don't want to bruise anyone's ego or tax their MTV indoctrinated brains. So, I guess the code will have to go.

It isn't so much the "code" being removed which has dumbed it down, it used to be you "had" to know electronics to get a license. Blame it on the Study Guides which really don't teach SHIT.

Personally, instead of seeing this CODE argument going on forever and not solving a damned thing, using the above post of the other necessities of life - if you intend to get anywhere - let's argue - and understandably so and more welcome than the code argument - why the classes are being dumbed down for our kids! Around here, the schools are wanting to build near professional sports arenas and I'm speaking "millions of dollars" - for the "Football" games - to hell with the studies. They "used" to give you basic supplies when you went to school, now you buy your own. The "School Board" seats are more hotly contested than some of the "State and Local" government seats. Yet the education level isn't improving.
No child left behind? Eh, not if they're foot ball players. IF NOT - they're screwed.

Just my 2 cents.

I know this is getting OT, but I agree. Ever see the stats on what the school board people and administrators get paid compared to teachers? Ever look at the ratio of school board administrative staff to teachers? In New York some years ago investigative reporting indicated that there were approximately 7 administrators per teacher and most had "company" cars. Now we know where the money goes and why real education doesn't matter.

What've ya got?  Looking for something in the larger caliber
autoloading category.  Have two wheel guns now, one .357, the other
.454.  You wouldn't happen to have anything by Magnum Research, would
you?

Hi all,

I am transmitting in channel 3 of 802.11b, centered at 2.422Ghz.
Details aside, let me just say that it is very important for my
application that I sharpen up the spectral mask beyond that of the
802.11b standard. To be specific I need to purchase a bandpass filter
such that I get attenation of greater than 60dB at +- 15Mhz from the
center, i..e outside of [2.407Ghz, 2.437Ghz]. I am looking for
suggestions on where to purchase such filter(s) with the usual
parameters in mind, cost, lead time, etc.

I did see the filters that hyperlink sells, but it would take many of
their 8 pole filters in series to get what I need and they additionally
don't sell filters for one of the channels i would need. Maybe I need
to go custom on this? Any suggestions are greatly appreciated.
Thanks,

Kevin

Hi, I'm looking for a Collins 30L-1 Round Emblem, High Frequency, Linear
Amplifer. Not looking for any junk, actually I want one in excellent
condition, Must be Round Emblem... Prefer one that has already been
refurbished, things such as power supply, caps , etc...So as I do not have
to do it...Although I've restored a few of them...I just want one in
Excellent to Mint Condition...
If anyone out there has one of these amps, please feel free to e-mail me and
if you like call 718-331-7427

Thanks a Lot
Carl
N2MFW

You don't need to go custom. You need to understand the impossibility of
what you are asking for.

Thanks Biz! I was hoping you'd chime in, since you're the
resident HW-16 "guru" around these parts! I've printed off
your msg text and will begin experimenting on my rig as soon
as I can. It's too scruffy to "restore", but definitely a
good candidate for playing around with.

73,
Dean K5DH

Looking for a good Cabrillo type logging program for the upcoming CQWW CW contest - logging each contact by hand and then transferring to a home made logging sheet gets kinda old pretty quick...

Needs to be in Cabrillo format for submission.

Any suggestions? Prefer free or small fee (under $50).

Thanks.

John

Regarding testing for a ham license, I think that is a good idea. I just think we should be testing for skills that show some ability by the operator to set up and operate a rig safely. And we should test his ability to communicate effectively and courteously in a widely used form of communication that can be understood by emergency responders: voice.

I don't know about your area, but mine has two distinct tracks for kids. Those that are headed for a college education receive various levels of advanced classes based on ability (more or less). Those that are on the vocational track receive math and english at a level to get them past NCLB requirements and the equivalent of shop classes. The stadiums are for the most part outdoor with bleachers looking over a multipurpose playing field that has a running track around it. And this is one of the higher income areas of the country.

I do agree that sports in high school and college can be taken to absurd levels of importance. In many locations, especially urban ones the high school is essentially a farm club for colleges which are a farm club for major league sports. I would love to see the system taken back several notches but there is too much money at stake for that to happen.

Don't you just love these egotistical assholes who have to ANNOUNCE that they
are unsubscribing, hoping that they will get a bunch of email begging them to
stay?

Don't let the door hit your ass on the way out, whiner!

Can someone give me a hint, where i can find the definition of the LOWE
HF-150 external (Keypad) protocol?

Thanks in advance

How are you measuring the SSB output?

1 to 3 watts indicated on a moving needle type meter will be very close to 10 watts PEP.

/s/ DD

I have picked up a dead tr-7800 at a junk sale

The price was good - the transmit was dead but apparently the receive worked.

When I got it home I could hear static but the led frequency display did not even power up.

I can not locate even a circuit diagram on the web - can anybody point me at any resource that might be useful in getting this transmitter to at least receive.

thanks
Bruce

We already DO have an 'America hater' in the White House, and his name is 'Shrub'.

He already HAS nearly destroyed the country and the Constitution. The Democrats are the country's only hope for a return to sanity, and the vast majority of the nation's voters understood that.

Let him do it,Jail is the best place for him.
**************

The bottom line remains. No-Coders should salute their superiors and should
give up their chairs as a matter of courtesy.
Doing so is a simple show of respect.

No-Coders should be made to stand at the back of the room until they can
pass no less than 5wpm. Then, and only then, will they be allowed to come to
the front to whine.

When are you stupid 31%ers going to get over it?  No one gives a fuck
what you think anymore; chickenhawk bitches like yourself have just
been rendered irrelevant.

you're being too kind
When I grew up I was taught that every boy could grow up to be President.
I never imagined it would be the rich kid flunkie in the back forever
daydreaming in class.

indeed it is but being a good guy myself I am pointing out to him the
results of his insane suggestion

besides that way aftter he pulls and gets busted I can be a more
vituous in saying I told you so

What are some of the best places for buying components for homebrew
equipment, these days?

I'm looking for places with good stock, good variety, and good websites.

Right now I'm mainly looking for B&W Miniductor stock and transmitting
capacitors, for making antenna traps, but I'm also looking to build a
linear amplifier for use with my FT-817 ... and after that, who knows?

I've lost track of the good places over the years, and many of them have
gone out of business, so any suggestions for the current best places would
be much appreciated.

Start with RF Parts for standard transmitting capacitors, tubes and
associated parts for amplifier building. Yes, you might find cheaper -
somewhere -- but start here.
http://www.rfparts.com/

WD7S is a good source for major assemblies for advanced or experienced
builders (no "teaching" technical support should be assumed).
http://home.earthlink.net/~wd7s/contents.htm

Get to know your local metal scrap and garbage/junk man -- so much stuff is
thrown out these days -- that could be useful for amateur radio projects is
amazing -- the current "new amateur (Novice) -- seems to have little
interest in building or the necessary basic skills to even start.

B&W Miniductors --- those favorites of do-it-yourselfer's - Barker &
Williamson's (B&W) Miniductor and Air Dux coil stocks-are getting harder to
find. When you do locate a source, you'll find the inductors are rather

expensive. Typically from $15 to $100 each !!
http://www.bwantennas.com/coils/coilcat.htm

QST August 1997 article. page 33 by Robert H. Johns, W3JIP
"Making your own air wound coils and inductors !"
http://www.arrl.org/tis/info/pdf/9708033.pdf

IF you are going to be building an triode and tetrode amplifier --
then you should seriously consider usage of the G3SEK Control Board (over 1,000 sold to builders):
http://www.ifwtech.co.uk/g3sek/

It looks like I'm going to the Ft. Wayne hamfest, will be there Nov 17 and Nov 18 till about 1 or 2 PM.
I plan on bringing the following if there's any interest:
Collins 30S-1 $1600.00
Collins 32V3 $1600.00 spare final and matching Astatic T-3 mike
Collins 30L-1 $600.00 Round 2 spare finals
Collins KWM2 Round $600.00
Collins 651S-1 $1100.00
Drake L75 $1000.00 One 3-500Z with internal supply 160 thru 10
Central Electronics 100V $600.00
Cubic R-3030 dual communications receiver VLF HF $1600.00
ITT Mackay Marine R 3021A VLF HF $600.00
Hallicrafters SX 62A $200.00
Hallicrafters S-40B very clean $125.00
All items in above average condition, very little wiggle room on price as they're going to eBay if not sold or traded.
I'll be driving I 44 Tulsa to St Loius and perhaps a bit beyond afternoon Nov 16 and on Nov 17 driving I 70 to Indianapolis and I 69 to Ft Wayne arrving early Friday afternoon. I might be able to stop along the way depending on where and the time.
 I'd also consider a trade on good acoustic dreadnought guitar from Martin HD 28, Taylor 810 or 910 or Gibson or a good older 5 string banjo.
Let me know
Hank wd5jfr

Some people say Bushie was born with a silver spoon up his nose but I
know that didn't happen until his 30's.

Let's see, prior to that was his drinking problem and, oh yeah, running
a major league franchise into the ground...NO, wait...there also was a
phony oil company that he ran into the ground.

Iraq? Afghanistan? Katrina?
Bushie's just doing his usual "heckuva" job.

Any wonder that Dems gained Congress?

BTW, the only fraud associated with Kerry was Karl Rove's invention.

1159678991.838385.310840@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh since Lenny Bruce died, Hoffman said, "Really? He was my god." The combination of satirical irreverence and sense of justice that Bruce and Hoffman shared was the real spirit behind the Yippies--a term I coined to describe a phenomenon that already existed: an organic coalition of stoned hippies and political activists who engaged in such actions as throwing money on the floor of the New York Stock Exchange, then explaining to reporters the meaning of that symbolism. Folksinger Phil Ochs summed it up: "A demonstration should turn you on, not turn you off." So when journalists link the Yippies with misleading bedfellows, at best it's careless shorthand; at worst it's deliberate demonization. Osama bin Laden wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

IC-706MkIIG was working perfectly. Typical setup is 30 watts output, PSK31 or RTTY, via short length of coax to an MFJ tuner, thence to ladderline running to 250' low horizontal loop. Working with no problems BEFORE I decided to rearrange my radio area. Rearranged my gear and ran into trouble as soon as I fired things back up.

On two bands the SWR is never less than nearly 2:1, as indicated by the MFJ meter, but much much higher by the 706's internal meter. Try to tune the antenna system; if you dial in less inductor than it wants, or a capacitor setting it doesn't like, SWR suddenly spikes to infinity and the tx shuts off after a second. (Tuning is done at lowest power setting, not 30 watts.)

The 706 works fine on 6, 10, 12, 20, 30, and 40. (I worked a guy in California on 12, just checking things, and after we cleared a ZL called ME on the frequency--ZL on 30 watts is clearly "working fine.") But on 15 and 17 meters, it will NOT achieve a low SWR, and sooner or later it WILL oscillate or denooberate or whatever it is doing and spike the SWR, and shut down.

I tried a lot of things--different coax, etc.; nothing made a difference. (I was thinking at the time that it was the rearranging equipment that caused the problem.) Then I did the systematic testing and found the problem is only on 15 and 17 meters. (Fifteen's my favorite band, too.) Now the only two things I can think of are A.) some problem with the big loop, that presents some weird resonance on 15 and 17. Or more likely, B.) some problem with a component in the 706, one in the output section that is specific to 15 and 17 meters.

Thoughts? TIA!

I think the biggest problem, is that people keep feeding the trolls.  I
have a pretty big kill file now and they keep coming up with new names,
so I keep adding them.

well you need to stop feeding post to the kooks at auk but the trols
if they go unfed start making rl trouble so yes I feed to the trolls
to keep them our of my Real Life

Possibly, but they constitute the greater portion of effective regulars.

TEH WAY OF THE K00K
Never learn from your mistakes.
Always practice your mistakes; you may get them right.
Always pick on those smarter and tougher than you.
Always believe that only you know the TRVTH.
Never allow logic or reason get in the way of a good k00k.
When being overwhelmed by logic and reason: k00ksuit!
If you are going to be wrong, do it at the top of your lungs.
When caught in a lie: LIE!
When in doubt: Order the Crab Won Ton
Plagiarism is your friend. Use it.
Whenever contradicted; morph, start calling people names, and make false
accusations. Include the children of your target in your allegations,
even if they don't have any.
(06-Jun-05) When nobody else will listen, post to your own fan group.
(06-Jun-05) Obviously, since you have your own fan group, this must mean
that you have fans. Post prolifically to your fan group - you wouldn't
want to disappoint them!
(10-May-2005)Everyone reads usenet. Approval here means approval
everywhere.
Post numerous blank posts, or posts containing only a message id.
Post numerous copy&paste web articles from crackerpot websites.
Never forget to call kookologists "k00ks."
If there are several, call them "sockpuppets" too
When all else fails, accuse various and sundry kookologists of e-mailing
viruses to you.  This is a sure-fire method of garnering sympathy and
```

ensuring that the General Public will always see things your way. An especially effective sub-strategy here is to accuse them of infecting you with the 'Sasser' worm via e-mail.

Quote notorious scientists or writers - it makes it look as if they approve the drivel you are writing!

(9-Jul-05) Anytime your computer is infected with a virus, bogged down by spyware, attacked over your internet connection, or otherwise suffers from preventable problems, government agencies are responsible and are trying to silence you and are monitoring your computer files.

Ignore all traffic signs and feel free to trespass, you don't have to obey any rules.

Scare your enemies with lawsuits, police escorts and whines.

Always back up your empty (albeit noisy) threats with phony LARTs, false police reports, and harassing letters to the FBI and other gubbermint agencies.

Be vigilant in your redundancy. The more you repeat yourself, the more likely others will believe you!

If you can't find anyone as crazy as yourself to support you in the flamewars you start with the normal population, create sock puppets and use anonymous remailers that shamelessly hang on every word you write.

(17-Mar-05) When dealing with law enforcement, remember that it is they who have the problem, not you. Be sure to inform them of this at every available opportunity, as they will surely appreciate your constructive criticism. Be sure to make them aware that YOU KNOW YOUR RIGHTS! ("The cops like that, when people know their rights. That way they don't have to read them to you on the way to the station." - George Carlin)

The more your fake personalities adulate you, the more respect you'll get!

When confronted with a reality that you don't like: Announce loudly that you are departing, never to return as long as there's an Internet. Come back in three or four days and claim you were drunk, hacked, abducted by alience, or forged. Alternately you can just not even mention your prior departure, and if anyone asks you about it, either ignore them or respond with something along the lines of "YOUR NOT THE BOSS OF ME! *PLONK*!" People really know you mean business then.

Always remain clueproof.

(20-Mar-05) Anyone who does not believe that you are the reincarnation of [$DEITY_OR_PROPHET] is obviously an infidel lacking in faith whose soul in in peril of everlasting damnation.

When responding to one line challenges, post paragraphs of rants and screed in response.

Incoherency is not a roadblock to poasting.

Neither is illiteracy.

Delusions poasted often enough become fact.

Claim you will destroy <insert newsfroup> for attacking you.

When spnaked, send cmsg for Fanboi newsfroup(s).

Find your Lame, Use your Lame, Be your Lame!

Post Edit when the TRVTH hurts.

Always sneck the offending newsfroups.

Always poast pictures of yourself so you can be admired in all your k00ky glory.

Always accuse others of the very acts you are guilty of.

Post lots of boasts about your high IQ and incredible talents.

(20-Mar-05) If you repeat a lie often enough, it becomes the truth.
Anybody who fails to understand this is engaged in a deliberate campaign of misinformation and character assassination.
Always <plonk> somebody just before replying the plonkee!
The k00k considers itself the most intelligent person in any conversation, possibly on the planet. Other people are benighted and ignorant, and have been waiting their whole lives for the k00k to rescue them from intellectual darkness.
Write a self-published book and claim it a success. Bonus points for comparing it to "Mein Kampf" and/or the Bible.
Declare yourself equal to a deity of your choice.
Claim that you've come from other planets.
Claim thousands of past lives.
Frothing complaints carry far more weight when you send them from "legal@" some domain.
Nothing strikes terror into the hearts of your detractors more than telling them that you're archiving their messages for possible use in the future.
Never forget that everyone else posting to Usenet is a paid disinformation agent looking to discredit you.
Usenet is governed by US law. If a poster in Romania killfiles you, he's obviously violating your 1st Amendment rights and can be sued.
Every news admin in the world hangs out in NANAU, and they're just dying to nuke the account of that meanyhead who just called you "fucknozzle". Drop 'em a line - that's what they're there for, after all.
AUK will be closed down. Just you wait and see.
They've nuked hundreds of accounts in the name of free speech and *yours* will be next.
The k00k will, without any trace of irony, lie, manipulate, impersonate, censor, and declare themselves powerful in ways ranging from the ability to have an account shut down to being God Herself, in order to convince people that they are not liars, manipulators, censors, or insane.
Abuse women while telling how many hundreds you've loved. Nevermind that you're one ugly motherfucker and that there were 30,000 femininas that thought you were a scumbag with bad teeth.
Remember that your ko0ky klaims are 'facts', and that 'facts' do not require proof.
Do not neglect to poast your responses to forums that the originator doesn't read. This will make the people in that forum very impressed with how you tear him to shreds without him being able to respond. They like it even better if you are off-topic for that forum.
Keep in mind that lack of evidence supporting your konspiracy theory actually _is_ evidence, of how effective the konspiracy is in hiding.
(06-Oct-05) When spanked, always retreat to the safety of the Ad Hominem.
(04-Aug-2005) When spanked mercilessly for days on end, proving with each poast just what an illiterate and ignorant fool you are, ALWAYS claim ownership of [person(s),froup(s)]. This works on so many levels. It inspires dread in your opponents that they will no longer be able to poast in their home froup and that they will eventually have to pay rent, to name just two.
Any problems with your poasts are the fault of the konspirators, who are trying to stop you from preventing the extinction of humanity.

Konspiracies that are able to subvert whole governments are always unable to silence konspiracy ko0ks.
The entire United States government is willing to spend millions of dollars for the sole purpose of harassing you.
Hollywood is making movies based on your personal life.
Do not consult psychiatrists or other mental health professionals. They are part of the konspiracy, and will sedate you and lock you away and keep you drugged if you tell them the truth.
Numerology and Astrology are respectable sciences and are useful for proving your case.
Everyone is Tim Hill, or David Green, or...
There is a fine line between trolling and kookery. Find that line and cross it repeatedly. When you are killfiled and/or LARTed for net.abuse as a result, claim victory. If you lose multiple accounts, this merely proves that you are indeed a world-class troll, with a black-belt in manipulation.
If you respond to every post someone else makes, they're obsessed. If they respond to less than 1% of your posts, they're even more obsessed.
Publishing people's real names, addresses, and phone numbers when there's no other way for you to come out of a flamewar with any dignity is cool, and proves that you are a master of secret internet information stores, and absolutely not to be fucked with.
Everyone is out to get you. You can put a stop to this by telling everyone that they're out to get you at every available opportunity.
You are the only sane one.
Those that give you a hard time about morally bankrupt things you yourself admit to are just persecutioners of the new inquisition.
Yelling in all caps and cursing at your detractors is debate. Your detractors laughing at you with sarcastic remarks is obvious anger and jealousy.
If doing something results in the loss of your account, legal hassles, or blunt trauma injury, do it again. It always works better the second time.
Asterisks, lots and lots of Asterisks.
Poking holes in kookscreed is stalking, and is a felony.
K00ks LOVE to "connect the dots". They are, of course, dots that only the k00k can see.
"They laughed at Einstein, too!"

...with thanks to Aratzio, Dr. Flonkenstein, Dan Baldwin, Cujo, CJ Osterwald, Jade, Bookman, and John Henry, of AUK. Meow. Original thread at http://tinyurl.com/3fsho - some posts may not appear due to x-no-archive headers. The spelling mistakes are intentional, dolt.

I'd like to add Dan's Small Parts web site to that list. No toobs, but lots of RF-related parts. Great prices too.
http://www.danssmallpartsandkits.net/

No-codes are violent I tell you.

Why does everyone want more of them in ham radio, I just don't
understand it.

What are you listening to, CB? I'm not on CB, so you don't need a filter
for me.

I'd actually prefer to take the cattle prod away from you, shove it in your
ass sideways, then shove it in your mouth and tape the switch closed.
Sissy-boi.

Long time subscriber saying adios....

When the BS outweighs practical communication, the longtimers vacate.

Those of you who bemone the rise of ebay have destroyed the alternative
with your whining and petty bickering. Good job!

I had to open my filters to see what you are discussing - yes it is

polluted and causing declining use by normal folks - but use your spam
filters... Post and reply to only relevant people and keep the group
going...

GREAT DEAL! "ROBOT" SSTV Units, Robot 400, Robot 800 & Robot 1200C w/
manuals all packed in two boxes ready to ship. Buyer never sent
money! Will sell for $125 plus S&H from 23320 Zip Code. Part of an
estate, units are as is, removed from shack of WA9USE.

Gotta agree with Denny. There are just a few folks here that
cause problems. Ignore them. There are lots of decent folks
here that post regularly, and many more lurkers.

Steve

scneedssfu?

I think you should foreget the code and go back to just using the regular letters. You don't make sense in either format.

Nothing that he writes makes sense and he just keeps feeding the trolls.
  Just ignore him and add him to your kill file.

Went to fire up the Yaesu Ft-890 and it won't power up. I have power to the
radio but pushing the power button does nothing.
Used it a few days ago and everything was fine. There was no storm here so
it didn't get zapped.
Is there some kind of fuse inside this radio?
I have limited electronic knowledge, so is there something I can check that
may be a common failure to this rig that I might be able to do?
Bought it on ebay last year and its been flawless, but to me its not worth a
few hundred to ship it out to be fixed.

Well, you answered your own question ...

"I have limited electronic knowledge -- its not worth a few hundred to ship it out to be fixed."

Sell it on eBay as a "Broken" or "Tech Special" -- you will get some of your money back to buy a new radio (with warranty) at your favorite amateur radio store for Christmas.

Hello, I want to know which is the channel spacing in the motorola GP300?
12.5Khz ? And second where can I found the software for programming,
I hear one called gp300spa.

Best regards from Chile
Alvaro Monares G.

Steve,

I asuume by "won't power up" you mean completely dead - no lights meters etc.

The FT-890 uses an external power supply. Are you using the Yaesu FP-800 Power Supply or another supply? The manual warns users about reversing the power input leads!!

Try the following:

1. Check the power supply leads to see if you have 13.8 volts. You will need a digital volt meter but these are pretty cheap at Radio Shack or your local hardware store. Disconnect the supply from the receiver and record the voltage.

2. Even if you have 13.8 volts the supply may not be able to provide enough current if it is defective. Check it with an automobile light bulb. This will show if there is enough current to power the receiver. Record the voltage with the light on - still around 13.8V??

3. Reconnect the power supply and measure the voltage as you turn the power on and off. Any change? If everything is OK so far the power supply is OK

4. If your meter has an amp scale put the meter to the amps range (2 amps or more). Disconnect the red lead only (leave black attached) and put the meter in series. (one probe to the red lead and one to the + output of power suply). Measure the current with radio power switch on. Any current flowing?? If you get nothing at all you may have a loose power connection internally in the radio, a defective power switch or unfortunately an internal power circuit problem.

Are you confident enough to open the unit and poke around with your meter??

Good luck - Roger

Power supply OK. Even tried a brand new car battery to make sure. No lights
or anything comes on.
I have enough nerve to take the covers off and poke around a bit as I have
nothing to lose at this point.
Am retired and divorced once and buying this radio was chore, so if this is
scrapped there will be no replacement.
It has the auto tuner built in, what would be a fair price to ask for it for
parts?
Thanks for help.

Steve, ask around about the local ham radio club... There will be folks in the club who will be happy to give you a hand trouble shooting your radio...

As you drive around keep an eye open for the tell tale beam on a tower where a ham lives... Just ask folks you know or meet if they know any ham radio operators... Ask the guy next to you at the donut shop... Walk into the Radio Shack store and ask... If you are in mid Michigan give me a buzz on here and I will make arrangments for someone to help you... The CB shop at the local truck stop may be able to offer advice...

The electronics professor at the local unversity or college... Ask around the high school and there is likely to be someone who knows someone... There is help if you just work at finding it... The radio is unlikely to be scrap...

good luck - denny / k8do

Have you priced it? Might that be a factor?
The rep of the 'autotune' Alpha amps is nothing to write home about...
Might that be a factor?
Folks like Commander, QRO, Acom, and Tokyo make amps that put out more
power at far less cost and that do not shut down in the middle of
working a new country,,, Might that be a factor?

Don't take my rhetorical questions as an attack on Alpha... I wish them
well, but their product appeals to a very small niche market...

Steve,

Denny had some good ideas on how to get your radio fixed by local hams
etc. A radio that is completely dead is easy to troubleshoot -
intermittents are much trickier.

Have you checked the power cable to the radio? Unplug it from the rig
and use the meter and lightbulb to verify that all is OK on the
connecter end that plugs in to the radio. There should be fuses in the

positive and negative leads of the cable. You need to test them with a meter. Often they look OK to the eye but they are blown. If you don't have a meter try replacements of the correct amperage rating.

If you decide to take the covers off here are a few tips. Disconnect the power cable. Get a container to store the screws. They often get lost and it is impossible to find exact replacements. Do not remove any boards etc. - this is best left to someone with experience and proper test equipment. Look in the vicinity of the power socket - anything burnt or scorched traces on the boards?

I took a preliminary look at the circuit drawings for the FT-890. It looks like there is a relay that is activated by the power switch. When the radio was working did you hear a "click" when you turned it on?? If this relay is blown this is not an expensive repair.

Steve - it can be discouraging when this happens but don't give up on your radio. Local hams are often willing to help out. There are some FT-890 owners on the Yahoo group at
http://groups.yahoo.com/group/FT-890

Good luck - Roger

Hi all,

I'm gathering original WW2 radio equipment for use in the restoration of B-17G Flying Fortress 44-8543A, "Chuckie", operated by the Vintage Flying Museum of Fort Worth, TX. Yesterday I did a quick inventory of the equipment we have in storage. We have most of what we need, but we still lack some very important pieces.

We need the following SCR-274-N command radio items:

BC-442 antenna relay ass'y with RF ammeter and vacuum cap
BC-450 control box for three receivers
BC-451 control box for four transmitters
BC-458 transmitter, 5.3 - 7.0 mc
Any and all types of connectors associated with SCR-274-N
Ceramic "beads" used as insulation on the antenna leads

We need the following SCR-287-A liason radio items:

FT-142 mounting tray for BC-306 antenna coupler
PL-59 connector (need 2)
PL-61 connector (need 2)
PL-64 connector (need 1)
SA-13 knife switch (I think it's a 3PDT)
RL-30B trailing wire antenna motor and spool ass'y
F-10 trailing wire antenna fairlead ass'y
MC-163 trailing wire antenna element
DM-28 dynamotor for BC-348 receiver
J-37 telegraph key (NOT a Winslow part, too new!)
Ceramic "beads" used as insulation on the antenna leads

The equipment must be in excellent original condition with no modifications, but it does not have to be electrically operational.

We are a small museum, and we have no money to buy this kind of stuff. It takes all of the money we can muster to keep the Museum open and the B-17 flying. We're looking for donations here. We are a 501c(3) non-profit organization. All donations of equipment, money, and services are tax deductible. If you have any of the equipment we need, please consider donating it to us, and help us to share history with future generations. Thousands of people a year tour the B-17 at air shows and in our hangar. Chuckie is one of only TEN B-17's still flyable in North America, and not all of those ten are flown with any regularity.

Here is the URL for the Museum's web site:

http://www.VintageFlyingMuseum.org

Thanks in advance for your kind consideration, and also a big

Texas-size thanks to those of you who have donated equipment
and services to us recently:

KB1LNA, Charles Geis (complete BC-375-E transmitter station)
KX8XX, Mark Schmidt (UNUSED tuning unit TU-26B w/orig. box!)
Jim Bane of Jevic Trucking Co. (transportation services)

I donated a BC-348-R receiver, BC-459-A transmitter, and T-17
pilot's hand mic from my own collection!

73 to all,
Dean Hemphill, K5DH
B-17G 44-8543 "Chuckie" volunteer crew member

Yes when the radio worked I indeed did hear a click. That's how I knew the radio wasn't working without even looking at it.
That distinct click wasn't there and I looked at the rig and saw nothing was on.
I was hoping it was the power supply but I tried to hook the rig to a new car battery and nothing happened.
The fuses in the line are ok and there is power at the molex connector end that plugs into the radio.
Thanks for replies and suggestions.

Very cool....Manufactured by Sony/Tektronix. Dual-trace and Delayed
sweep.

2.5x2.0" display

DC to 35MHz, dual-trace (alternate and chop)
        scope face about 2.5" by 2"
        vertical deflection: 1mV to 10V/division
        sweep rates: 0.5 sec to 0.2 us/division, 10x magnifier (for
20ns/div)
```

```
        sweep modes: automatic, normal, single-sweep
        other features: variable hold-off, delayed sweep, x-y mode
        portable, line-powered (115/230VAC), or external supply
(12/24VDC)
```

Steve,

I only have the downloaded schematics to work with. I was not able to find a free service manual download on the net so I can only make some assumptions about circuit operation.

The schematics show the power coming in, via the molex connector, to the PA board. There is a filter circuit consisting of some capacitors and a large inductor. The output feeds a relay (clicks at power on) which provides power to the rig. The relay is controlled by the front panel switch and a transistor control circuit associated with the PTT.

One thing to try is to check the keyer switch settings on the top of the radio. The Break In switch may be in the wrong position. Is it in full or semi?? Try both? Is the keyer in manual?? Remove the microphone as well in case there is a PTT problem with it.

You could try measuring voltages starting at the molex connector with the cover off. Put the black probe to ground and trace the circuit with the red probe. Look for loose connections, burnt traces etc. There is a set of schematics in pdf form at http://www.kb2ljj.com

Let me know how you make out - Roger

Ralph,

They had a lot of manuals but no FT-890 service manuals. However,
they had the user manual and schematic.

Thanks Roger

Steve,

I searched through the Yahoo Group - Amateur Repairs for similar "dead"

FT-890 problems. I found one which may be of interest.

As the unit ages oxide builds up on the connector mating surfaces and sometimes leads to erratic operation. In one case, an FT-890 had exactly your symptons - dead and the front panel power switch did nothing. The solution was to disconnect all power and external connections and remove the covers (saving the screws). Then carefully disconnect and reconnect, one by one, all the connectors on the various boards. The disconnect/reconnect scrapes away some of the oxide on the connectors and restores a low resistance connection. Then reassemble the unit and try powering up again. Make sure you have discharged yourself for static (wear cotton clothes and no nylon carpet!!) prior to starting the job.

If this solves your problem you may be OK for a while. In a few months it may come back. In that case you should buy some deoxidant from a radio repair outlet and use it on the contacts for a longer term solution.

Hope one of these ideas works and it is not a component failure.

Regards - Roger

Hi Fabian,

I have a copy of the TS 870s service manual in pdf format.
It is about 41Mb in zipped form. Let me know the best way to get it to
you.

Regards

Hi all,

I am looking for the Technical supplement for the FT 50r.
I have the schematics and other info, but I really need the service
manual.

Any help would be greatly appreciated.

Believe it or not I got it working! I am shocked. Not sure what I did.
This rig might of been mobile as I got a mobile bracket with it and the
power cable was questionable around the fuses (bends in wire) so I replaced
it.
With your suggestions I opened the radio up and started tracing the wires
from behind the molex connector and found where it connected to the circuit
board.
I took the wires loose and cleaned it up cause I kept seeing the voltage on
the multimeter swing. A couple of times I heard the relays partially click
but no power.
Anyways, with the radio in halves I got it to power up, however when I put
it back together it was dead again with no partial relay click.
I took it apart again to the point where it would power up and slowly put
things back and checked power after each segment.
Now the radio is all back tohther and so far still working.
Perhaps something came loose cause I know the pervious owner did a Mars mod
on the radio and who knows what was done if there were other owners.
Thanks for everyones help.

And then normally, Markie's gibberish is so stupid it's funny, and someone else follows-up and teases him, which causes Markie to fire back with more gibberish and the whole point of my post to save ham radio from becoming like CB is lost under all the turds piled on it.

But that's OK. I'm not whining. I'll just make more threads.

Tnx, 73, and keep on Crappin.

SC

Hi

I would like to replace the power pack with something with a larger capacity. I followed the instructions to remove the two black trims and 5 screws, and can take out the power pack, but it consists of 3 AA(?) cells wrapped in a moulded plastic container, arranged in a triangular cross section, with a wire running to the motherboard. The question is, has anyone else experience of replacing this?

Hi Guys,

I have received a few emails about the TS 870 service manual. I checked and it is now available on www.mods.dk under Kenwood and then manuals. This is probably the best option for multiple downloads, however if you have trouble getting it from mods dk I am happy to work out way to get it to you. I once heard of a download server that enables the file to be uploaded to it so that another can download it after receiving an email invitation, I'll try to find out about this method, since most email accounts will not allow 40Mb files.

Regards de VK3EFP

I apologize for cross posting, but I do not know the prime group for this reply.

When the truth is known, a lie is a deliberate attempt or a deliberate action to mislead.

A lie does not require an oath to become a lie. A lie is a LIE in all circumstances.

A Spell Checker would be quite a help. I use mine 100% of the time.

I may not use the correct word, but the word I do use is spelled correctly.

:-)

You mean 2008. By that time we will be overrun with illegal aliens, but no
matter, as Al-queda, after celebrating our elections, is now formulating plans
for the biggest terror attacks yet, knowing Congress will have no guts to do
anything about them.

If you need 4X4, better work it now, because the first thing the Iranians will
do is nuke Israel.

Nope! I mean 2009!!!  The next president takes office in January 2009.

Now, congress and guts. The Socialist Party of the USA [AKA Democrats] will
fund, directly or indirectly, Al-Quada NOT to attack us.  If we are attacked
they will threaten sanctions. If the sanctions threat doesn't work they will
debate the existence of Al-Quada at the UN. If that doesn't work, then Al Gore
will hug some trees. :-)

PEACE at ANY PRICE is called appeasement. We all know where that led in the 1930s.

The war on terror will run well into the mid 21st century. You better believe it!

Markie takes pride in all the various ways he can mis-spell something.
Try not to figure out what Markie is saying, it will just give you a
headache and it's not important anyway.

Looking for a working (properly) filter unit (including the infamous stepper relay) for an IC-720A.

Alternately, if anyone has an NOS RL2 relay Part number SR-53-44C, that would be great as well.

TIA

Brenda Ann

I m wondering if someone might have had the same problem as I do.....I
have a full 10 watts on fm, both simplex and repeater operation, but
only about 1-3 watts on ssb, and cw....the reports that I have had on
all of the modes are good, but just down on ssb and cw....can anyone
help...thanks Paul

Whaaaaaaaaaaaa!!

Have you ever sat on the toilet and tried to fart your callsign in
morse code?

You're so wound up, I bet you could fart your call at a nearly
perfect 1000Hz square wave.

SC

Charlie -

Thanks for the HRO link - I did not see that they have "pre-announced" this change on their web site.

Based on the dates on their web site the sales/support will likely coincide with Tokyo HyPower being granted a FCC certification under Part 2 equipment authorization standards.

FCC R&O WT Docket 04-140 ("Omnibus" Amateur Radio proceeding), adopted on October 4, 2006 and released on October 10, 2006
http://www.arrl.org/announce/regulatory/wt04-140/faq.html
Q. What were the changes eliminating certain restrictions on equipment manufacturers?

A. Simply put, the guidelines on external RF amplifiers were clarified. They must still be granted a certification under Part 2 equipment authorization standards and may not be easily modifiable to non-amateur service use. They can not exhibit the ability to amplify in the 26 - 28 MHz frequency range. The FCC also decided not to include a definition of kits as they apply to RF amplifiers.

Changes to the 75 / 80 meter band are receiving the most "on-air" comments !!
New band chart -- as listed in FCC R&O, subject to clarification (typos in FCC R&O -- noted by many observers !!!).

http://www.arrl.org/announce/regulatory/wt04-140/Hambands3_color.pdf

What is your point.?

I amswered his query in a positive way.

You obviously know there ARE cw portions of bands PLUS a cw only band
which is OBVIOUSLY what was referred to.

If you could not manage 5wpm in 5 years then you have an unusual
difficulty, or you were not taking the time to do it and stay with it.

Remember I said "normal faculties and normal physical dexterity". A person with ADD or Dyslexia may not be able to , and others with other issues may not. (I know lots of blind guys who are hams, they dont think blindness is an impediment to ham radio or the code)

He asked if cw would keep us from Amateur radio. I amswered the question indicating I did not think cw was a difficult impediment and used examples why from my own experience.

If you have dyslexia then youdo not have normal faculties and dexterity
and the post did not refer to you,. Why bother responding?

I SPECIFICALLY EXCLUDED you in my original post.

On a related note I emailed THP for a quote on the new HL-500V 500W solid
satate 2M amp I was considering.
They want $2300 + $250 shipping..a little pricey for this country boy so I
ordered a TE 1454 from Burghardt instead and Astron RS70M for a total of
around $780

hi,

best bet is to recycle them at your local retail store,
target, walmart, home depot, lowes, etc.

you'll need special charger(s) for these batteries,
otherwise they can overheat and safety vent opens
and or cell can rupture (explode is also possible)

better idea is to use common Nicke Hydride
NiMh batteries available at above retailers.

be safe, do more research on lithium battery technology.

lion dude..

If Slow Code left, I would miss him.

I do not agree with him most of the time. As a matter of fact, he is dead wrong a lot of the time.

At least he stands up for what he believes in.

I myself, do not think that every ham should have to be able to send/copy code at 20wpm no more that I think they should be tested on psk,rtty, slow scan tv. etc.

Some people have a passion for code and some have a passion for other modes. I use them all from time to time, and to be honest, after I move next year, I am going to work on my code a bit more when I have the time to do so.

However, I will still give him a hard time about his ranting. After all I have not heard anyone tell him that he is not a real ham because he does not have psk nailed down..HI HI
Joe

best anti-RF ignition wiring TYPE

background:
I am getting my vintage AM/FM Delco reconditioned with the intent of getting that "cruis'n feeling" I will also add non-vintage sound deadening, and other electrical/static improvements noted here and elsewhere. Thanks for the help.

My query in a different area. In the sixties, I was always changing ignition cables attempting to minimize "ignition buzz" on my radio. (not really a problem since the mid-70s). Back then, I found one type that worked ok, but I cannot find it any more. (Most of this help in the 60's came from that Hams, thus I am including them in this question)

Now for the "new" question.
What "TYPE" of ignition wiring for maximum should I get for my Avanti (with modern electronic distributor) R2?

I have a very nice Ameritron ALS-600 Solid State 600 watt HF Amplifier with the ALS-600PS Power Supply for $875 plus shipping from 79602. Amp is in very nice shape and works perfectly. Comes with
original shipping cartons and manual. Thanks, Charlie Hugg, K5MBX

Most all new cars use anti-rf plugs and cables.. Just get a set of
quality resistor plugs and resistor wires.

There are only 2 types of RF supression wire: resistive and inductive. The latter is often referred to as "magnetic" and is widely available, but it doesn't seem to work any better than the resistive type. A significant amount of igniton noise comes from the connection between the plug and the plug wire, and grounded metal shields over the boots can help here. There are wire kits with these boots, mostly for German cars, or they can be made with metal tubing slipped snugly over the metal bases of the plugs.

Don't argue with Mark unless you like to argure. Mark will toss out every bit of illogic he can to try to justify his case for being a bad hams, and he wants to let others like himself in so they can tear down the service.

I was part of the big RRAP CW and anti-ARRL fights of the late 90's up until restructuring went into effect, then my posting tapered off. I'll disappear again once the FCC totally kills off ham radio by eliminating the code requirement. When that happens, I'll wear a strip of black electricians tape around my arm in memorial and observe twenty-four hours of radio silence in memory of a once proud service.

Rest in Peace, Ham Radio. You were a good and faithful friend.

Good afternoon, Charlie.

Yeah, I saw that. Nice amp. Unfortunately way overkill for the FT-817,
and anyway I need something that can run from 13.8 volts.

HRO still won't be carrying the THP low-drive amps, until the FCC wakes up
and realizes what a dumb rule that is...

Thanks, I don't know why I didn't think of that. <sigh>

The rig is what it is, and the law is stupid and serves no purpose.

But, thanks for the advice... :-)

Yeah, that's unfortunately true.

I have the skills and knowledge, may be rather short on the tools and test
equipment and time, and perhaps the manual dexterity these days... :-(

Anyway, THP seems to have a pretty good reputation and I'm willing to take
my chances...

Are you sure, first of all, that it's ignition noise you're experiencing, and
not alternator whine, or EMI from another source? Or is this just all
precautionary?

First thing I'd recommend, IF there's noise, is confirming the source of it,
before putting the time and effort into addressing one possible source.

Yep...as Matt says.........

I've got a so, so AM-FM radio with "inexpensive" plug wires.

The ignition is quite...but the alternator whines a bit. I know for a fact it's the alternator because it's one of the one wire types that comes in at about 1600 rpm when cold. So a first start at low rpm...no chargeing....the radio is noise free. As soon as the alternator comes in....whiiinnne.....

Mike

Another alternative is a Ten Tec amp they last produced in the 1970s
for qrp rigs.

Just to clarify, he's talking about an Avanti here; having an
all-fiberglass body, suppressing ANY source of noise is of utmost
importance.

And it could be noise from a DC motor (fans for air/radiator). It could come a
variety of sources. I would narrow it down, and it shouldn't be too
hard to do either....

Bob

Generally, to cut down the static noise (RFI) on older cars, you would find condensers on the alternator, distributor,   wiper motor, and on the radio itself. There was also ignition shielding and resistor wires and plugs. The values on the condensers are all different, so swapping them may cause problems rather than being a remedy. I've never seen any on a heater or A/C fan motor, but it's also a source of RFI. Even sliding your butt on the seat covers will create a charge. You remember those little flexible tails that used to be attached to the chassis and drag on the ground?.

now this is interesting,
I remember fabricating for my neighbor's '62 Ford a metal can with braided shielded wires to cover his distributor and cables out to the plugs. I no longer knew when he drove out of his driveway by watching the patterns on my TV (UHF). ;)

Now for the question.
Any one know if these boots, if self-fabricated, are essentially a CYLINDER, grounded by contact with the engine block?

I recommend getting a copy of the ARRL Hints and Kinks for Radio Amateurs
book... get one of the mid-fifties editions and there is a whole section

on eliminating ignition noise with homebrew shielding over the plug wires and shield cans over the distributor.

I agree that with modern resistive wires, things will be a lot better. Back in the fifties, plug wires were normally copper. Often folks would buy it on long rolls and terminate it in the shop themselves. Today, plug wires have a conductive element that is conductive plastic, usually a nylon with carbon in it, and the wire itself has a few kilohms of resistance. That, combined with a modern coil design, means you get less high frequency ringing after the initial spark impulse which cuts way down on the noise.

I did not realize it was an Avanti. In that case, I think I would be worried less about noise issues than making sure the radio antenna had a proper centerpoise, because it can't use the metal body. The more

signal you get, the more noise you can live with.

On the surface these amps look like one hell of a buy. It will be
interesting to get some reports, and see a service plan. For the
purpose of marketing in this country, I would think they should change
the name to something more generic......like Yeawood or Kenesu.

Win.

          On piston-engined aircraft the plugs, wires, and magneto
distributor caps are all metal and are grounded. The shielded cable is
grounded at the mag end and the plug end. There's no ignition noise
from such a setup.

Ian-

Charlie's suggestion to try it with a dummy load is a good idea. That would (probably) eliminate stray RF as the source of the echo.

It would also provide a non-reactive load, in case your output stage happens to be oscillating at some frequency determined by the tuner. A further check on this would require a spectrum analyzer, ham-scan or a panadapter to see if you are transmitting on more than one frequency.

>HRO still won't be carrying the THP low-drive amps, until the FCC wakes up
>and realizes what a dumb rule that is...

From a practical standpoint, what does it matter how much power an ilegal operator is running? I mean if these yokals are already out of their band (I presume the FCC is concerned about the freebanders) what does it matter if they are running 25 watt transceivers or kw amps? It's 16 db difference, who cares? The real concern ought to be that they are operating on frequencies that are not assigned for them. If them operating there is a problem, why not go after them and put them off the air. In fact (I amaze myself with my insight sometimes !) wouldn't it be easier to locate them if they were running some power? Wouldn't it make direction finding easier?

A 25W to 50W amp is quite easy to build using the CCI Motorola designs. Then
you can taylor it to your needs- built in auto or manual tuner, QSK
switching etc.

A bootlegger operating with 25 watts is likely to interfere with legitimate licensed operators of the band in question.

A bootlegger operating with a kilowatt "linear" amplifier is likely to interfere with legitimate licensed operators of the band in question, and with users of bands which are harmonically related to the band in question (a lot of the cheap "linear" amps are anything but linear, and splatter quite badly), and with TV and radio reception for a significant distance around the transmission site (fundamental overload affecting the wide-open RF front end circuitry), and with people listening to stereo and using the telephone (rectification breakthrough).

The number of people who are adversely affected by the unlicensed operation goes up quite sharply once an outboard amplifier is added to the equation.

You do have a point there, at least for base-station operation. Unfortunately, it's rather more difficult to take advantage of the "louder is easier to locate" issue when the illegal operator is mobile... and it's my impression that a lot of the illegally-high-powered CB and freeband operators are mobile.

Also, the "locate them and shut them down" approach assumes that resources are available to actually locate the illegal operators. The FCC seems to have largely abandoned (or, at least, seriously scaled back) its own field-enforcement efforts, over the past couple of decades... if I recall correctly this dates back as far as the Carter administration. The FCC now seems to be depending largely on the ham community to report suspected cases of freeband/unlicensed-10-meter operation.

I suspect that the FCC is trying to deal with the problem at an "earlier" stage of the chain... stopping production and sale of the amplifiers, rather than trying to track down individual users. They don't seem to be particularly active/effective even at that, though, considering the ease with which one can locate numerous companies making/selling such amps (and easily-modifiable freeband-capable radios).

I need a good schematic and or Service Manual for a Dentron Clipperton QRO
Amplifier.
I am having trouble with the tunned input circuit.
Thanks, Charlie Hugg, K5MBX

Yes. I made some from conduit that extended about 2" above the plugs.
I found it didn't mater whether or not the tops were covered with
metal, but I applied a bead of silicone RTV to prevent the sharp edges
from cutting through the wire insulation. I slit the bottom of each
tube lengthwise to make it easier to press it easier to press around
the hex part of the plug.

That's the same outfit that told me they could supply 7mm wires but only if
I wasn't putting the stainless shielding back in place.

I currently have a HTX 202 and I am trying to fiind a good covert headset on E-Bay because I work as Maintenance and I can have the radio on at work as long as it can't be heard while I am working in the building because the tenants might take it the wrong way.

So if someone could help me and send me some links to sales if they have some or can help me out it would be appreciated.

They also sold spark plugs with built in resistors.

Sometime in the past couple months I read a one page writeup on an inexpensive device being marketed that provides an analog to digital interface to computers.   I think you could use a linear 0 to 5 VDC input such as from a wind speed sensor and feed it to the conversion device which would provide a digital output to your computer.

I only subscribe to QST and CQ magazines, but I give them away when I'm done with them so I can't go back and find that article.   Anyone else see what I'm asking about?

I suspect you will need a decent shielded cable for an extended mike
cable , although cat5/6 foil wrap and some .001 caps might do it ?.

Do you have the manual for the radio they are all listed in the back.
OPC-440 5.0 mtr
OPC-647 2.5 mtr
for mic extension..

I have a friend that just bought a used Ten Tec Scout, it came with a 40m
and a 80m band module. He is looking for 30m and maybe 15/17m as well.

If you have any of these you'd like to sell, please send me an email.

I have done this to my IC2800 with no problems whatsoever. the radio is with the spare wheel and the mic plugs into a socket mounted in the dash with the cable (CAT5) being routed around the car.

Also I have extended the display lead in a similar way (but due to not having a 6 way plug/socket for the dispaly out came the 'iron and heatshrink and more CAT5) again no problems and due to the fact that I couldn't be bothered to measure, the cables are long enough to mount the radio in the back of a huge camper and still use it from the front seat!

Sillybilly I missed out the important 'wiring diagram':

use a test meter on ohms or a continuity tester to cheeck that:

pin 1 (plug) goes to pin 1 (socket)
pin 2 (plug) goes to pin 2 (socket)......................................

....)
pin 8 (plug) goes to pin 8 (socket)
This will give a 'straight through' extension.

The socket I used was a wall mounted type, which I adapted to suit the fitting space available in the car, and the wires connected via IDC on the back .

I have HEARD of people using CAT5 patchlead and gender changer (double socket) but not tried it. I just used/adapted what I had in my 'junk box'

If in doubt and near Cardiff let me know, I have loads of CAT5 cable. I'm sure we could 'hook something up!'
All the best

I have an M C Jones MicroMatch (Microwave Devices) and the pot in the indicator unit (Model 262 w/ Model 261 Coupler Unit) was replaced with a 500 ohm potentiometer. What is the correct value to allow the scale to match the pointer, and is it straight or tampered? Would like to have a copy of the schematic, if anyone can e-mail it to me.

I'm using a standard Cat5 cable you'd use for your computer. Don't
use a crossover cable as it won't work and just might wipe something
out on the radio. I put in a 6 foot cable and it works just fine.
The only problem is that it slides all over the place as the cat5
cable is smooth.

One thing really nice with this radio is it has narrow fm and 500
memories. I just used the bracket it comes with and put velcro on the
bottom of it. Got it stuck to the front of my dashboard.

Its a great radio.

the fact the mike is not mounted on the control head seems to me be a
major design fault. after all, phillips, tait, etc. got it right all that
time ago...a retrograde step indeed.. just my two bobs worth...........j
(sorry no solutions :^))

Many years ago in the TV bussiness we would use a alliance tenna rotor
4 - wire on a 3 - wire
channel master control box. Now i have the same combination i need to
install on my 6 meter beam

however i fot got the wiring setup?
 Does any remember the proper wiring, i think it was combine 1&2 or 3&4
or maybe just dont use #4 but i cant remember the wiring now.

Yes that's the mic lead. Got the tape measure out and measured the rough length of the extended mic lead, it's about 10 meters.

The 'head' on the 2800 only has 6 wires and I just 'snipped & extended' for that using the 'extra (unused)' wires as earth/ground.

2M of cat 5 and a back to back coupler work fine for one of my cars that has the 208e in it.
And heavy duty velcro mounts the head unit to the dasboard, and the hook strip sticks the radio body to the carpet.

I've done something similar with my 208H as well.
I've used flat telephone style cable about 1.5 metres long, no ferrites, and
a RJ45 back to back adaptor to connect the standard mike. Works fine,
though I'm told I have some buzz on TX if I have my vehicle headlights on -
not sure if it's alternator whine, or being induced through my unshielded
section of cable, have yet to investigate that.

I dunno about that but I've extended my IC706 separation cable with STP
cable (CAT5 with shield) very successfully. Cable 10m long no problems.

No, but I asked them to start testing on PSK, RTTY, APRS, Computer Interface
Logic and Theory and a half dozen other digital points. Does that help?

There are two pilot lamps used for fuses next to the input connectors
on the receiver board. With luck you have burned one of these out.

Try as I might for now I can't find the P/Ns.

hi all,
i was wondering if any body could shed abit of light on a fault i have
with my FT707,
when switched on the display shows random numbers it reads, 9x.xxx.xx
(x been a constantly changing number)
there is no rx or tx on any band, yet there is audio, and the MARK does
work, but only on 20m
there is no xtals in the set.
it's a 707 with WARC bands
i have no clue as to what it could be...any help would be great.

73 to all
Mart, M3FVS

Hi Mart,

Do you mean the heterodyne oscillator crystals are missing? If this is the
case then there will be no conversion and thus no freq readout and no RX or

TX.
Do you have a schematic and a scope?

Dale W4OP

Thank you for the information, exactly the PL1 (or PL2, I do not
remember it) was burned but it is not quite, for the present time I
continue looking for the breakdown, thanks!

The message is brings 870 over of my, has not lost the receipt
completely, a great fall of signs is obvious and in 20mts. The
sensibility is of 1microV, that is great with regard to them 0,2microV
that deberia to have.
If it happens to someone a little, please to send message, from already
thank you.

There's a manual for the IM2410 counter here:
http://bama.edebris.com/manuals/heath/im2410/

It's probably worth a look.

John

I failed to mention that the IM-2400 is a handheld about the size of a large
TV remote. It looks like it may have had nicads in it they're missing and
all I see a red wire with no connector dangling, no ground but I think I
could use the grond of the PC board. So I need to know the voltage. BTW
the BAMA site has a desk model, AC powered.
tnx

Hi...

I have one... the back panel says:

(quote)

EIA-416

Five - 1.2v ni-cad batteries
(heath co. part no. 418-32)

CAUTION: operational hazard may exist
if any battery charger other than the model
specified in the manual is used

(end quote)

Take care.

Ken

Hi Henry...

Not a problem, I'll trade you ages :)

Should have mentioned that the manual will still be around here, so if you'd like any pages scanned just let me know.

Take care.

Ken

I have for sale the fellowing items from a couple of estates. Most of the
gear has been stored for several years.
1. A nice TenTec Century/21 Transceiver. It works and looks almost new, but
the PTO is stuck. Needs PTO servicing. It has been stored for over 10
years.
Receivers well; Full output. Price$145.
2. Atlas 210X nice shape, works. Price $175.
3. Azden PCS-4000 2 Meter Mobile Transceiver with mobile mount. Looks great,
but needs work. No transmit. Has mic and manual. Price $40.
4. Tokyo Hy-Power UHF HT, Model HT-7, Micro FM Transceiver/Micro 7. NIB, but
no batteries. $35.
5. Pace Communicator MX, 2 Meter HT with manual, needs batteries, $25.
6. Cushcraft Ringo Ranger II, Model ARX-2B, 2 Meter base antenna, $40.
All item plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

Hi,

I seem to have a problem with my kenwood 450s. I can transmit fine on 80 and 40 meters but when I go to 20 nothing plus there is what sounds like an echo when I try to transmit. The antenna tuner says the SWR is Ok. I use a G5RV antenna and thought that this may be the problem. I have just installed an "ENDFEDZ" 20m end fed dipole, the results are the same. I can receive OK and there is no difference on the transmit side when I bypass the tuner and connect either antenna directly to the radio. Any help / suggestions would be gratefully appreciated.

Many thanks
Ian

How does it perform into a known good dummy load? If you don't have one get
one ..about $39 from MFJ

1. http://www.mfjenterprises.com/products.php?prodid=MFJ-260C

I tried to send you info about the ones I have available in your private email. I guess we both know you are unreachable. If you act the same way with your home address I will have no place to send a radio anyway.

Bill

Hi,

Like everyone, I've a number of mobile phones which I don't use anymore. I was thinking I could make use of those rechargeable batteries which are going to waste. How do I put them to use in small devices like portable radios, toys. They seem to have 3 battery terminals -
how do I wire them ? What is the voltage ? How to ensure that I don't blow my radio up ?

Thanks in advance for your inputs,

Mike Tan

Hi,
I need to design an AM transmitter as a vlsi project (it needs to be located on smart dust later on).
Does anyone have any good suggestions were to start from? I am familiar with vlsi, but don't really know how to implement such a big idea, into a vlsi simulation and circuit design.
Looking on trasmitter's schemes didn't help, 'cause that's all resistors, amplifiers and capacitors. How do I translate it into vlsi design?
Be very glad to any guidance...
Thanks.

FS: Icom 775DSP HF Transceiver
Works and looks VERY NICE!!!!
THis was top of the line Icom still a very nice rig to own
and be proud of. Bright display and no scratches or dents. Non
smoker.   Price: 1550.00
Does 200Watts!!!!
For more information, go to:
http://www.icomamerica.com/support/archive/amateur/ic-775dsp.asp

Hi Mike, be very careful with that type of battery.
Charging them should be done with the charger meant for them (one
battery at a time).
Lithium Ion batteries are great but If charged wrongly they can explode!!!!
With a lot of force!!!!
Good luck and 73

JJ

5wpm ain't really learning it. I can fart 5 wpm.

Lets kick the requirement up there to between 13 and 20 wpm for all classes. And no-codes that haven't passed it after a year get booted which will help clean up the repeaters.

SC

Ok, I am a traditionalist, sorry.

5wpm should not be an impediment to anyone with normal faculties and normal physical dexterity.
I could do 5 wpm at 7 or 8 and I did not know a ham operator...my dad taught me after he came home from Army as Radio op. Never used it for 15 or so years.

At 25 I took a novice class (finally) and was doing over 20wpm in 2-3 weeks.

For anything above the entry license, a code increase would be warranted to operate in the best cw bands, maybe.

When I took my General, Advanced, and Extra I had to do it at the FCC office and took and sent code from the Director, Detroit office. Talk about nervous!
I dont think you can compare the V.E.C. experience (as good a job as they do) with that for excitement and stress.
When you came out of the MCNamara Bldg in Detroit, you knew you had taken a test. You knew you had earned your ticket!

No, I would not stay on C.B.......as good a service as it is, it cannot compare with the people of Ham Radio.

I have finally had enough of waiting forever for the FCC to get rid of their kill-a-fly-with-a-sledgehammer approach to HF amp regulation, so that I can get an amp for legal use with my FT-817.

Have any of you had any problems getting a Tokyo Hy-Power QRP amplifier past the border watchdogs and into the USA?

I try to be law-abiding but I'm tired of the FCC's inability to enforce the rules against the few, so they penalize everybody. I'd just like to get a reasonable power level out of the FT-817, for times when 5W isn't enough, and for legal use on legal ham bands with my legal Extra-class license.

Thanks...

The big issue is that unless you have the technical skills for repair (Extra
Class amateur and the GROL no longer have that meaning) -- you have to send
the Tokyo-HyPower ampfliers back to Japan for repair / service.
I have seen at least 5 units over past 2 years that the poor OM, complains
he does not have the $$ to send it back to Japan for repair --
so he begs me for a few $$ to take it or repair it or scrap it for parts so
he can then buy an MFJ or something else -- he can fix himself for get fixed
in USA.

Comments have been made by Tokyo HyPower earlier this year that they will
have a US distributor in near future.
FCC's recent Report and Order (R&O) in WT Docket 04-140 seems to move in
this same direction (HF amp regulation relaxation) -
BUT not for "dirty" RF amplifiers (such as the RM Italy products and Palomar
clones on eBay).

BTW, the HF Projects group has been building 50 watt "shoes" for the QRP transceivers for a few years --
and now has the HF SuperPacker Pro 100W Amplifier 7x5.5x3 inch, 3 lb footprint
http://groups.yahoo.com/group/hfprojects/

Why don;t you "get on the US build band wagon" of building your own amplifier (with your fellow US amateurs in a group) --
then you can actually repair that amplifier -- when you have a problem --
and save some $$$ and time
serial number 2 was just finished by a builder on October 2nd.

Better yet, here is the actual posting from the serial number 2 builder:

I was a co-author on the original HF SuperPacker article in Dec 2005 QST (along with Jonathan, WA3WDK). Jonathan and I consulted with Virgil as he designed the SuperPacker Pro. I worked on one of the prototypes and did some debugging of serial number 1.

Thus, it is not a surprise that I was able to successfully build the SuperPacker Pro. On the other hand, this project required no debugging. It worked for me the first time I powered it up.

I am happy to answer any questions about the build. If you post to this group also send me a copy by email. Find my email address on QRZ.com.

I hope everyone who builds the SuperPacker Pro has as much fun as I did. For sure, you will have a great little 100 watt (13 db gain) amp!

I've had enough of SC in newsgroups!

Please don't answer his flaming posts. I would like for my 14 amateur radio operator girl child (who is working on her code) to be able to use newsgroups without this abuse. We should not have to put up with it either.

Copy and forward the following to abuse@earthlink.net. They should be able to identify him from the headers and their logs.

Dear Earthlink Abuse . . .

Please get this clown off of usenet. There are several hobby groups where he posts regularly his inflammatory material, often with profanities. Our kids who are in the hobby certainly don't need to be exposed to this stuff.

Thanks.

Long time internet user and parent.

And if they fail the code test they get zapped again.

Bringing back 'spark' will be good for ham radio.

Why do no-coders always break down in the middle of an argument and start spewing profanities? I just don't understand it. It must be do to their limited mental abilities.

Opus being a Cannuk probably doesn't help either.

5wpm ain't really learning it. I can fart 5 wpm.

Lets kick the requirement up there to between 13 and 20 wpm for all

classes. And no-codes that haven't passed it after a year get booted which will help clean up the repeaters.

SC

m.News. EarthLink Members should use their best judgment when posting to any newsgroup. Many groups have charters, published guidelines, FAQs, or "community standards" describing what is and is not considered appropriate. Usenet can be a valuable resource if used properly. The continued posting of off-topic articles is prohibited. Commercial advertisements are off-topic in most newsgroups, especially regional groups not specifically named for such. The presence of such articles in a group is not indicative of the group's "intended" use. Please familiarize yourself with basic Usenet netiquette before posting to a newsgroup.

EarthLink considers "multiposting" to 10 or more groups within a two week sliding window to be excessive. EarthLink servers currently limit the number of allowable "cross-posts" to 9.

EarthLink Members may not cancel messages other than their own messages. A Member may cancel posts forged in that Member's name. We may cancel any postings which violate this AUP.

You don't. Use a kill file. If you don't, you have only yourself to blame.

It;s much less expensive in the long run than screwing around with everyone's
first amendment rights.

```

stoped I for one have choosen to accept his abuse in Silence having
come to agree with other in abotht the BLGT and Jewish world that
agree "silence equals death" yes you see more of this clown (and his
allies and sockpuppets since I began a campaign of resisting such
harrassment ghhe has choosen to step up the level with some goal only
he knows (if even he knows what ihis gaol is) I regret that excerising
my duty to myself myself and others like myself from this sort attack
has caused you any inconvence.

OTOH your 14 yo needs tomlearns that the world issoemtimes a hostile
place. I uncourage you to see this as a learning experence and theach
your daughter that there are those that get very upset over
encountering anything or anybody different

How do you get the subaudible tones to work on the Icom IC-2000? The
procedure in my manual does not work. (Or, maybe I'm interpreting it wrong.)

Icom IC-2000 Manual
http://www.icom.co.jp/manual/external/transceivers/IC-2000_H.pdf

Repeater operation - and set-up of CTCSS (sub audible tones) is on pages 13 and 14

This REQUIRES the usage of the SET mode.
Page 2 of the manual shows you where this button is on the front panel and how to use it.

Page 5 shows you the front panel -- see the #4 TONE indicator at the top of LCD ?

You MUST rotate your front dial to set the CTCSS frequency. THEN, the [DUP] button must be pushed to finally set to EXIT the SET mode.

� 2.815 External radio frequency power amplifiers.

* * * * *

(b) No person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease) or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier capable of operation on any frequency or frequencies below 144 MHz unless the amplifier has received a grant of certification in accordance with subpart J of this part and other relevant parts of this chapter. These amplifiers shall comply with the following:

(1) The external radio frequency power amplifier shall not be capable of amplification in the frequency band 26-28 MHz.

(2) The amplifier shall not be capable of easy modification to permit its use as an amplifier in the frequency band 26-28 MHz.

(3) No more than 10 external radio frequency power amplifiers may be constructed for evaluation purposes in preparation for the submission of an application for a grant of certification.

(4) If the external radio frequency power amplifier is intended for operation in the Amateur Radio Service under Part 97 of this Part, the requirements of Sections 97.315 and 97.317 of this chapter shall be met.

Outside very nice, dial cord broken, Inside little rough. All tubes work.
Can send pix. replay by email
billreed@w4pls.com if interested. Make offer.

Probably a long shot, but if anyone is interested in swapping
my Drake T4-X for your Halli SX-117, please contact me
directly.

The Drake comes with the power supply/speaker (MX-5?).
It is being offered as found, and will almost certainly need
to be re-capped. Front panel cosmetics are good. The radio
will need a good cleaning....lots of dust on the top of
the chassis. The cabinet top shows wear and will need
to be repainted to be nice. Under the chassis, its pristene
and not modified or hacked in any way.

Looking for an SX-117 in good to excellent cosmetic
condition. Must be complete and restorable to original
operating condition with NO hacks.

If interested, contact me soon. Once I start working on
the Drake I'll probably keep it and look for an R4.

Steve

Unless memory fails me, those units will do 2M fine.... but just above 146.000 MHz.

They are excellent rigs, though. I've had several on 2M and 440 in the past.

They will program below 146.00 by pressing the SHIFT key when entering
the numbers for the frequency. You enter 145.1700 as !$%.!&)) and save
this information. The correct frequency shows in the data field once it
has been entered. You will get a warning about the radio needing to be
recalibrated, but it will work below 146.00.

Hi,

I have an ICOM IC-746 with backlight lamp damaged (the famous
transistors talked on the web are good).

I need to get the Fluorescent lamp from the LCD, or even the LCD (if it
has the lamp) to repair my radio.

If you have one please tell me.

Best regards,

Luis Fernandes

luisbfernandes@gmail.com

Just purchased a new Yaesu FT-897D (HF/UHF/VHF) rig - had it only 3 days
(received it 10-13-06) -- it's a super radio but not for me...I'm used to
the bigger rigs with large displays and not so menu driven.

Will trade for Xlnt or Mint condition Yaesu 1000MP, Yaesu FT-990, FT-980 or similar, plus cash. No issues and prefer with filters.

Serious offers only - shipping to 63116 or I'll pick up if reasonable distance.

Thanks.

John

Hi all,
I am new to the group. I have tried to search the group in hope of finding my question but no such luck. I have a qustion. Does anyone know if this charger will analyze a single AA battery? I had also planned on charging up some ht battery packs with it as well as a 13.2v cordless drill battery with it as well. I will be using it to mostly charge batterys and occasinally anaylze them as well. Like i say my main batts that I use are AA batterys. I have been looking at this model but I just not so sure on it. Also would the Trition JR charge and discharge and analyze a single AA battery? As well as analyze a 13.2v drill battery? Would would you guys recommend?

Thanks,
Joe

Hi Joe:

Maha MH-C777Plus II

Supports Ni Cad, Ni Metal Hydride, and Lithium Ion/Polymer chemistries only!

Using Ni chemistries of 1.2v/cell or more (AA, AAA, C, or D or equiv. rechargeable battery pacs or cells)

Charge + Trickle function: 1 to 12 cells in series. [1.2v to 14.4v]

Also Analyzes (Discharge and hold function only) 3 or more cells only (No 1.2/2.4v cells alone)

Also Conditions (Discharge + Charge + Trickle function) 3 or more cells only. (No 1.2/2.4v cells alone)

For the analyzing function, it need a minimum of 3 cells to determine battery quality. I.E., Good, Shorted, Leaky, Reversed Polarity w/in a cell, etc.

You cannot do the discharge function if a battery pac has internal protection diodes, but you can do the charge!

If charging an expensive Ni battery pac for the first time, do monitor the total output in Ma/Hr, especially during the 90% to 115% period of rated capacity for excessive heat buildup.

Note: the first charging cycle on brand new batteries is likely to not fully charge the battery. Subsequent charging cycles will be more uniform and approach full at ~115% of rated capacity.

Although the charger monitors delta T & delta -V, the cell covering construction, cardboard, film or plastic pkg can fool the T sensor.

Avoid charging cells w/ low factory capacities, like 400Ma/Hr or less!
Avoid mixing batteries or those w/ different histories!

Long term trickle charging Ni-Cads will build-up internal xtal size, resistance and subsequent "memory". Use the Re-condition cycle on such Ni-Cads every 2 months or so.

I recommend this unit for techies who have time to learn the technology and monitor this Maha with its fast advanced charging cycle. [800Ma +/- 50 for Ni chemistry]

Hope this helps.
Bye.
Ed.

I have a new/unused Icom PS-125 that I got free with my Pro 3 purchase earlier this year. I've never had the PS-125 out of its box, so it's literally new and mint. I'd like to trade even-up for a Yaesu FT-60R dual-band handheld, or I'll sell the p/s for $175 plus shipping. I will ship via FedEx Ground to keep your costs down.

73,
Dean K5DH

Like new excellent condition Never mobile with original box and manual, I
kid you not, this has spent most of its days in the box. S/N: 9M280040.
NICE!!

Hello. I am in desperate need of the glass frequency dial for an SX-62. My sweetheart was thrilled to inherit a very nice SX-62B but the frequency scale was subsequently broken in transit. She was VERY disheartened. I was too. If you have an SX-62 parts unit with a good inner frequency scale glass, please reply ONLY directly to denis.sharon [at] att.net, not to the list. Thanks. Denis Sharon W1AOK

ROFL, Mark in the Dark

That's my new phrase for Markie: "Mark in the Dark"

We can overlook typo's now and then, but Mark butchers the english language.

LEARN CW, LEARN TO SPELL Markie.

SC

ICOM Delta 100 questions

I would like to hear from anyone on the board having experience with these. I have one I have been meaning to install and have some questions;

1. Control language between digital microphone and control head. I would like to emulate with a PIC and make two bands track each other for satellite work.

2. Band expansion mods for Japan market radio. I have a "mod from a Japanese site but haven't tried it.

My regular VTVM does AC readings, so I don't know what good this is...but
its so friggin nice looking!!!
Check it out here....

FS Drake TR-4CW/RIT  LIKE NEW!!!
I have a MINT CONDITION Drake TR-4CW  with RIT.   Works GREAT!
Serial #  44687
If you're looking for a really nice piece to add to you collection,
this is it!!!!
Look no further.
Please make offer.......Ready to sell.

>Thanks - Roger

The board is not that hard. YES there will be cables you will need to disconnect. Have your digital camera handy or just a paper and pencil and make a quick sketch of the board I used to do that before the camera says and sometimes its still easier than photos. When disconnecting multi pin connectors, pick on end and mark the wire color so you will get the connector reinstalled correctly.

I think one coax gets disconnected that goes through the from of the 735. There is an other or so too that you will see get tight as you try to life the board so disconnect it too. Just don't get then confused, maybe take a moment and mark them with masking tape.

Basically you will unscrew to board. Now with the front of the radio towards you gently lift the front of the circuit board. " walk " the board towards the front lifting it above the front of the radio.

You are working towards getting the rear connectors out of the back panel and clear of the rear lip. PAY attention to any cables that need removing and do so as you go.

Once the rear connectors are clear of the rear chassis lip you can then flip the back edge of the circuit board up and over to get to the diode solder joints.

Its really easier than this write up sounds. I have talked several through it over the telephone as you need to do the same thing to install the CW filter.

Over the years many have tried substituting those diode, even to installing pin diodes. While I was at Icom tried them at Icom and found no performance enhancement. We had one person remove and replace his band pass filter diodes with pin type and we could not fix that rig. We even installed original diodes back into it. It was an IC-751.

Call Icom's parts department for the diodes. Another source of Japanese parts used to be MCM audio

Here's the details. ICOM has a service bulletin that describes the problem and fix. You'll need to replace 5 surface mount capacitors. I ordered the parts from ICOM and the total cost is about $8. A link to the bulletin is
http://www.icomamerica.com/support/kb/Article.aspx?Download=180

The text of the bulletin is reproduced below:

"HM56/56A - Electrolytic Capacitor replacement

A common failure of the HM56/56A microphone, causing the radio to remain in TX mode when the mic is connected, is failure of the electrolytic capacitors on the microphone circuit board. Generally, replacing all 5 capacitors on the board repairs the problem and allows the microphone to work properly again. This repair is not a guarantee, simply a common failure point and reference for repair.

The 5 capacitors on the board are labeled as C3, C4, C7, C13 and C14. They can be ordered from the Icom parts department using the following part numbers:"

(see the bulletin for a photograph and parts list)

Thanks Gary for taking the time to write a detailed response. It sure
helps when someone who has done it before offers tips and
encouragement. Good to hear that Icom still has the parts.

Interesting about the PIN diodes. I was reading some of the old posts
about this subject and there was some debate about whether it worked
but no one had done any tests to confirm it one way or another.

I see I had a few misspellings. I meant camera days not says...
I remember one coaxial cable that runs from top to bottom through the
space between the chassis and front of the radio. I seem to remember
you will need to disconnect that cable.

I am not exactly sure if Icom still has those diodes but they were
used in quite a number of radios. I am sure if they don't someone
there will have a replacement recommendation.

You are correct the results were very mixed replacing the PN junction
diodes with pin diodes even though the pin diodes are better for RF
switching.

Some swear by the pin diodes and others don't. We could not see a
difference and the pin diodes are quite expensive. test gear did not
show any real difference, on the air testing was questionable with two
radio side by side on the same antenna.

Just give your self a couple of hours to do the job. It likely will
not take that long but you will not be rushed.

Gary K8IZ

Bought radio with blown final which I repalaced with same gain color dot . You can key the transmitter on ssb as soon as you talk off it goes into never never land . tried changing the 1000 uf cap at the b+ input no help. I don't know what stage is talking off. the tools at hand are a 35 mhz scope and a freq counter and of course a dmm with cap checker.

help
jon b

My equipment is IC-3220H with UT-55 modul, micrphon HM-56
(no UT-50, no UT-51). Is possible to send 1750Hz tone for reapeater.
If yes, in which way?
                                                              73

I have an idea. This should thin the ranks of amateurs and let Big Brother have the bands as is desired. We all know the FCC wants to sell the bands to the highest bidder. In addition to the code requirement, lets have proficiency testing in SSB, FM, RTTY, PSK-31 and Packet. That should just about kill the code proponents off, as they are mostly too old, addled, and unable to learn. That way, even they won't be able to use *their* bands without these proficiencies.

Sounds like a plan, eh?

And just who do you think developed these modes? How new do you think these
modes are? It seems like everyone I contact on the "new" mode of PSK31 is
retired and has been for many years.

sample check Dee: how many people that you contact on ANY mode are not
retired and have been for years

went to our Radio meeting tues night and a talk was given on the "New"
mode PSK-31

if your sample is skewed towrd retirees as badly as mine........

I could go for that.

The more testing, the better. Then outsiders would look at the amateur radio service and see valuable and capable operators, they would see our spectrum wasn't being wasted by people that only know how to talk into a microphone to communicate.

Thanks. :-) Great idea.

> believe it was rack mounted at an environmentally controlled site and
> seldom used. I don't have the feet and the small blank panels (where

> the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By the way, the RF output jack on rear enables you to sweep filters etc.
>
> The service manual is included._

If you have a European or Italian version press and hold the " TONE "
button on the mic for 1 to 2 seconds every time when you transmit.
This is shown on Page 20 of the IC-3220 manual.

If you have a US version then the 1750 Hz is not available, but
nothing stopping you from building up a small tone generator for that
purpose.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #34 (October 7, 2006) is now available
on http://www.soldersmoke.com

Ashhar Farhan joined us from India for #34:

-- BITX-20 transceiver.
-- HB in India.
-- EMRFD.
-- W7ZOI influence.
-- Hans Summers.
-- Quadrature rigs.
-- DSB and PSK31.
-- Homebrew test gear.
-- The importance of measurement
-- Farhan's 'scope.
-- Homebrew heartaches.
-- Homebrew spirit.
-- Symmetry.

Tired of listening to Led Zepplin or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.soldersmoke.com

All our programs are available here.

We hope you enjoy the program. Please send us
feedback.

73 from London

Hi,

I've been looking (without success) for a service manual or schematics
for a Systron-Donner / Datapulse 400 Function Generator.

If anyone has these or could scan at least the sine-shaping circuit
(which in mine has gone faulty) or point me in the right direction of
where I could obtain this information I'd be most grateful.

Thanks in advance,

Ian Holland

Hi
1SS53 are just switching diodes, nothing special. You can replace them with any 1N914 or other fast silicon small current switch diode.
Greetings

<sailtamarack@yahoo.ca> ha scritto nel messaggio news:1159738014.605849.232010@m7g2000cwm.googlegroups.com...
>
> 2. The diodes are 1ss53 which is a Japanese switching diode. They are hard to find. Has anyone found a direct replacement for this part that gives equal or better performance? (I do not want to change any of the bias resistors).

In great shape but does not transmit.  See my ebay auction for more
details.

In my packing I found a Fluke TRENDAR 200 IC TESTCLIP that I do not
need. It looks complete and includes the manual. Used for in-circuit
and chip testing of most 74XX series devices. Foam rubber inside is
ratty, but the plastic carrying case is like new.
$45 plus shipping.

73, Dick, W1KSZ

Good riddance! Both John and Karl whose bellicose, fragile

egos contributed to the ruin of QRP-L by chasing off brilliant

contributing engineers and operators then ultimately forced the

exile of QRP-L from its home on listserv.lehigh.edu . Cheers to

QRP-ARCI with exercising their Freedom of Disassociation

and dumping Beavis-n-Butthead!

I need donations for my penis reduction.I was born with a huge schloong
and it's very difficult to carry around in my pants. Please help me
with my pain. I need this reduction operation now.

The IC91ad is is an extreemely cool DIGITAL ham radio with loads of
scanning features.and over 1000 memories
I have created a new less uptight Yahoo group devoted to this cool
radio so if you are interested come join us at
http://groups.yahoo.com/group/IC91AD
Enjoy.

And this isn't a buy and sell newsgroup either, and again, even if it was, what you are selling is not amateur radio equipment, which this newsgorup is about.

To make those two stupid mistakes worse, you don't even know that you shouldn't be posting the same message separately to different newsgroups. If you really had to spam the newsgroups (and it is far better to find the most appropriate newsgroup, but given you are hitting irrelevant newsgroups to begin with, I imagine finding the appropriate newsgroup is beyond your mental capacity), you do it by crossposting to the newsgroups with a single message.

Hello Are you interested in the New digital capable Icom IC91 AD? What about
D-Star?
If so Come join us at the New more laid back IC-91AD Yahoo group.
We are just starting out so come join us and watch us grow.
The reason for this group is simple. I have vast experience in the area of
owning and moderating newsgroup type lists. The other groups devoted to this
radio have gone nowhere. I am serious about making this THE group. we
already have files for modding the radio the manual and other files are
available for the asking.
This group will have a laid back approach.
occasional Jokes are allowed.
Anyway I will add the 91AD to the list of groups that I own and hopefully
this will become the single point of interest for this incredible digital
capable radio.

http://groups.yahoo.com/group/IC91AD/

Hi I have VHF Yaesu FT-10R radeo. When I set the frequency below
128MHZ, the display flashing and no signal received, Frequencies higher
than 128MHZ are OK. Can anyone tell me the reason, any setup required.

Thanks

Musiciandelight

I have a motorhome on a Ford E450 chassis. I wish to install a mobile radio in the cab area, and run the DC wiring through the firewall, to the battery. Preferable, the wiring will go through on the driver's side.... it does seem a lot less congested there.

My question: has anyone done installations on such a vehicle? Can you suggest a good location to run a pair of #14 wires through the firewall? ANy ready made access or do I need to drill?

When I need to get through the Firewall on a vehical I usually go
through the rubber collar around the steering column.

Combine this radio with any ol' 11 Meter antenna and listen to the
world come alive! This popular Model 3837 Sears Roadtalker Transceiver

has the built-in AC power supply for plug'n'play base operation as well

as the 13.8VDC option. Extremely nice condition rig that ranges from
28.300 to 28.745 MHz with clarifier that works in both transmit and
receive modes. 25 watt PEP input power and digital display.
Includes original microphone, owner's manual, AC and DC power cords,
mounting bracket and conversion data.
Hard to imagine more enjoyable entertainment for the dollar during long

winter days and nights. $75 PayPal or Postal Money Order plus 13#

```
shipping via your choice of UPS or USPS from 75605.

Yes, have done that too.... but this vehicle has no rubber collar around steering mechanism or even the wiring harness pass through.   Thanks for input, though.

Ed

ARRL Bulletin 19 ARLB019
>From ARRL Headquarters
Newington CT October 12, 2006
To all radio amateurs
SB QST ARL ARLB019
ARLB019 FCC releases long-awaited ''Omnibus'' Amateur Radio Report and Order
Ending a protracted waiting period, the FCC's Report and Order in the so-called ''Omnibus'' Amateur Radio proceeding, WT Docket 04-140, was adopted October 4 and released October 10, 2006. In it, the FCC adopted nearly all of the proposed changes in the Notice of Proposed Rulemaking released back in 2004. The FCC has:
+ expanded the phone subbands in the 75 and 40 meter bands;
+ permitted auxiliary stations to transmit on portions of the 2 meter band;
permitted the use of spread spectrum on 222-225 MHz;
+ permitted amateurs to retransmit communications from the International Space Station;
+ permitted amateur licensees to designate a specific Amateur Radio club to receive their call sign in memoriam;
+ prohibited an applicant from filing more than one application for a specific vanity call sign;
  eliminated certain restrictions on equipment manufacturers;
permitted Amateur Radio stations in Alaska and surrounding waters more flexibility in providing emergency communications;
clarified that ''amateur stations may, at all times and on all frequencies authorized to the control operator, make transmissions necessary to meet essential communication needs and to facilitate relief actions'';
deleted the frequency bands and segments specified for RACES stations;
and
deleted the requirement for public announcement of test locations and times.
In addition, the FCC took several other miscellaneous actions.

In ''refarming'' the frequencies currently authorized to Novice and Technician Plus licensees, the Commission increased the voice * 90%segments from General, Advanced and Amateur Extra licensees.
On 75 meters, Generals will be able to use voice from 3800-4000 kHz, an increase of 50 kHz. Advanced class licensees will be able to use voice from 3700-4000, an increase of 75 kHz, and Amateur Extras will be able to use voice from 3600 to 4000 kHz, a generous increase of 150 kHz.

On 40 meters, Advanced and Extra Class licensees will be able to use voice from 7125-7300 kHz, an increase of 25 kHz. General class licensees will be able to use voice on 7175-7300 kHz, an increase of 50 kHz.

On 15 meters, General class operators will have phone privileges on 21275-21450 kHz, an increase of 25 kHz.
ARRL President Joel Harrison, W5ZN, expressed the ARRL's gratitude to the FCC Commissioners in a letter dated October 11: ''On behalf of the ARRL and the Commission's licensees in the Amateur Radio Service I want to express appreciation for your release yesterday of the Report and Order in WT Docket 04-140 (FCC 06-149) amending Part 97 ENDof the Commission's Rules. The Commission's action in clearing this pending proceeding will assist the Amateur Radio Service in meeting its objectives, particularly with regard to providing emergency and public service communications.''
The changes will go into effect 30 days after the R&O is published in the Federal Register.
    (courtesy of KH6JF if anyone on this group is interested)
                   Joe/ABM6JF/KH6JF

That's what has always cracked me up about CB WADIO cops.  Why do they
attack others on the internet when they should be cleaning up the 11 meter
airwaves in their home towns. What a bunch of Loons.

In my 1999 Winnie (it may be an F-350) the cigarette lighter and the
Diagnostic plug are alone on a 20 amp fuse. You might want to just
pick up that circuit if you are under 20 amps.

My E450 (not F) has an additional cig lighter type socket a few inches above the cig lighter socket on the dash. I would much prefer to wire directly to the battery, but will consider your suggestion if I can not find a decent way to route wire to the engine compartment. Thanks.

Ed

There is usually enough room alongside where the wiring harness passes through the firewall, also alongside where the heater/air goes through. On some Ford trucks there was a rubber plug in the floor behind the drivers seat. Also if you have an on-the-floor shifter, that's also a good spot to pass a pair of wires. If you have to drill, do it if possible on the side kick panels, then route the wires into the engine compartment from the wheel wells...

Bob, some of that info above may be applicable to my vehicle. I'll have to get out there and dig around some more to see what the best of those options may be. Thanks.

Ed

hello i always figured this would never happen to me but my heart is having serious issuses do to a birth defect (i was born with a hole in my heart)and need money to have the surgery to get the hole fix so i am asking for donations to help with the cost since i dont have insurance so if you have a paypal account please look into your heart and donate a dollar or two my paypal emial is mcollins7373@msn.com i need around 20,000 dollars usd to have the surgery done. This is my last resort for money i have

tried goverment agencies family and friends and to my dissapointment nothing happened SO PLEASE I NEED HELP thank you so much mike collins

P.S. THANKS FOR ALL THE HATE MAIL WHERE WOULD THE WORLD BE WITHOUT HATERS

Hello all, I am new to this group, and I am partially looking for a Standard Communications EEProm Programmer for the GX3000 Two way radios, I have not been able to find one anywhere, so I figured I would put up a post on here to see what I might find as random sales and such.....

Thanks if you can help me with this little problem

Charles

GMRS Lic holder, and Repeater o/o

Dressler NIB  (still sealed in shipping box) $450 shipped     ARA100HDX

covers 40 kHz to 100 MHz and is designed for the interception of weak
signals even in the presence of strong broadcast station signals. The
ARA 100HDX is a alternative for those who do not have the space for a
traditional outside wire antenna. It is compact and unobtrusive. The
output impedance of the antenna is always 50-75 ohms, independent of
frequency. This allows efficient connection directly to the receiver
without an additional antenna tuner. The ARA100HDX will not overdrive
most portables.

Universal sells for $550

Do you think discussions on repeaters are as technical today as they were 25 Years ago?

25 years? Probably about the same, since repeaters had been around at least 10 years by then. You could by a repeater over the counter with tone squelch, and several other toys built in, so they were no more complicated than a 2 meter handheld. My high school Amateur radio club built a two meter repeater of of Motorola and GE strips, homebrew powers supplies, diplexer, and timers in the late '60s. What is the big deal, unless you have multiple sites and voting receivers? We were just a bunch of RF crazy teenagers with less than $50 to spend, and we wanted to build a repeater. A few months later we were given a surplus WE Touch TOne decoder module, and added a phone patch.

Like everything else the club did, we raised the funds by repairing old electronics and selling it to buy the parts we needed for the next project. the only new piece of equipment we ever purchases was a HW-16, in kit form. BTW, CW was the least used form of communications from the club's station. they could do that at home, but we had some nice antennas, the two meter repeater, and several full coverage HF rigs.

These are Radius M216's in very good condition and work perfectly. They were
just removed from service.
These radio's can do the 2 meter Amateur band.
$175.00 each plus shipping.

1-D33LRA77A5BK
1-D43LRA7PA5BK
1-D43LRA7PA5BK

All radio's are complete with mics, brackets and power cables. I can NOT
program these radio's.

If interested please email direct.

Possible, but with more distortion (oops, he calls it compression) than he claims.

http://www.telstar-electronics.com/SkyWave%202879AB.pdf

Now was that all so hard, Brian? Did you peruse some websites to rethink your internet theories? "LOL"

Hi,
I have bought an antenna rotator AR-500 on eBay but the seller didn't have any instruction manual concerning the remote programmable unit.
Can somebody help me to find one ?
Thanks in advance

D.K.

Am listing NOS and a few used EF Johnson parts along other stuff too at:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZheytubeguy

If you are in need of one of these parts, get them while available.

Tnx for looking: heytubeguy

I have just posted some pics to alt.binaries.picture.radio of the De Forest Crosley 1722 radio I picked up yesterday. The cabinet has a couple of minor veneer issues but the underside of the chassis is where the work will be.

Anyone have any info on this?

I have the info I could find on the net, blurry schematics, but would like a cleaner scan if available.

Thanks
Brian

```

Apparently there exists a problem with the HM56 microphone that causes the radio to key up spontaneously due to capacitor failures on this microphone.

Can anyone provide some assistance on the details of this procedure. Supposedly there are 5 surface mount capacitors that need replacement.

```

FS AEA KT-3 Keyer/Trainer with manual Good condition, actually works!

$40 shipped (USPS) in US. I take Paypal.

FS Kenwood TR-2200A (AKA DRAKE TR-22) 2 meter portable transceiver!
Loaded with crystals, this unit actually works and the pilot lamp works
as well. Includes original mike and telescoping antenna in good shape.
The case is a bit rough but with proper cleaning and olive drab paint
shoul look quite presentable. Someone wired a permanent DC cable to it,
but should be able to restore to original battery power.

$45 shipped (USPS) in US. I accept Paypal.

http://www.rigpix.com/kenwood/tr2200a.htm

FS: GMRS - SECURENET MOTOROLA PORTABLE REPEATER STUFF GMRS /\/\()-|-()!

OK what I have to sell is the following

Genuine Motorola MX-300 Channel Elements _New Old Stock_ for GMRS
Repeater Station pair 462.575 TX and 467.575 MHz RX. The TX element
works with the 24.4 MHz offset element (included) required for use in
the Motorola P44SYS3180B Securenet Portable Repeater. But Wait, there
is more:

Included is a carton of clean MX-300 parts, some new, consisting of
several 440-470 MHz band radios, enough to build the RF decks for a

complete repeater and have spare parts left over.

These are all for the 440-470 MHz band. model P44sys3180b. If you have a 406-420 MHz model with my parts you can convert the 406-420 model to 440-470 MHz pretty much by just plugging in a few RF modules. Or, provide your own box and controller and you can build your own repeater!

Price $99 shipped USPS to US I accept PayPal.

I will provide a service manual for the Securenet P44sys3180b repeater for an additional $10 to the buyer of these items.

FS LGC Wireless AMPS Fiberoptic/CAT5 BDA RF Remote Antenna Unit DAS8A-4

If you know what this is, you might want a spare. This is the small stylish white RF box that goes at the reradiating antenna. Has a CAT5 connector on one end and an SMA on the other..

$35 Shipped in US via USPS. I accept Paypal!

FS Tiny AMPS phone Ericsson AF738

Good condition

Sorry no battery.

$14 shipped via USPS in US. I accept PayPal

FS Realistic TRC-465 AM/SSB CB Radio. Excellent physical and electrical condition, in the original box with all acessories. Plus service manual. Lightly used, this is unmodified and clean unit without any appearance of wear. I am including a LARSEN NMO-27 black base loading coil (missing the ~42" whip).

$59 Shipping included via USPS. I accept Paypal.

For Sale: HP3586B Frequency selective level meter VLF receiver

Description :

HP 3586B Selective Level Meter 3586B: Meets North American Bell requirements, 50Hz to 32.5MHz frequency range with 75ohm unbalanced signal input, 4kHz to 1MHz frequency range with 124ohm balanced signal input, 4kHz to 1MHz frequency range with 135ohm balanced Input

This unit has the high stability oscillator and is excellent condition. No dents, no scratches, and no dust inside whatsoever. I believe it was rack mounted at an environmentally controlled site and seldom used. I don't have the feet and the small blank panels (where the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By the way, the RF output jack on rear enables you to sweep filters etc.

The service manual is included._

$495 plus shipping from central florida

For Sale AN/GRR-24 Receiver UHF 243 MHz Guard Receiver

Untested (no ac cord), appears complete, case has wear.

$75 plus shipping

For Sale: M2 2MCP22 Circularly Polarized Satellite, EME, DX Antenna 12.25 dBc

I bought this with intent to re-install my satellite station. However I don't need the 22 element model as the 18'7" boom is a bit much for my location.

This antenna is spec'd from 144 to 148 MHz 1.4:1 VSWR and so will be good for all modes of operation in 2 meter band. M2 makes a fine antenna (list price $305 new) and is very easy to deal with. Since this item is used and is assembled, it is for pick up only in the 32765 central Florida area. You can transport it with an SUV or minivan as the boom has been disassembled into three sections approx 7 feet long.

Price $100. Pick up in 32765

For Sale: APCOR Whitebox UHF MEDCOM Telemetry Radio

For sale $55 plus shipping.

Help me clean out my garage! This unit appears to be in fine condition and inside appears to be clean and untouched. If you check my last posting, I am selling some other similar Motorola MX-300 components which include MX-300 Channel Elements _New Old Stock_ for GMRS Repeater Station pair 462.575 TX and 467.575 MHz RX . So if you are real handy, you could convert this to a GMRS repeater.

For Sale: Matheson model 8065 Freon leak hunter.
For CO2, Helium and R12 gas leak detection. I haven't tried with R134
but suspect it will work. This is a
lab grade detector that runs off AA batteries. It is like a large gun
and has an internal fan to pull the gas into the probe. Condition is
like new $185 Shipped in US

A friend of mine has an ABE L60/TH, 60W p.s. UHF band (470 to 860 MHz)
amplifier, with a 3 cavity and a 6 cavity 500W tuneable filters also
supplied by ABE. All in mint condition. The part numbers are:

L60/TH/U/Ch 68 amplifier

L60/TH/U/Ch 68 STD I bandpass
L60/TH/U/Ch 68 STD I notch

The two filters are mounted on a 1U 19 inch rack mount, also mint.
He has asked me to sell them, any offers before they go on ebay?
Cheers,
Terry

Ken-

This is the first I've heard that someone had solved the problem, which is apparently common. Mine keys the transmitter when power is first applied. After several seconds, the transmitter unkeys and everything is OK until powered down. Replacing the CMOS battery didn't help.

Somewhere I found a copy of the HM-56A diagram and parts list, possibly at www.mods.dk. I suspected that a transistor connected to the CPU's reset line was leaking and slowing down the power-on reset. I had not considered capacitor leakage as a possible cause.

Please post if you learn more.

73,
Fred

FS Drake TR-7 HF Transceiver. This TR-7 has the optional CW and AM Filters. It is in very good condition and works great. It has the sticky Drake cabinet, but is not all scratched up like some of them are. All of the dial and meter lights work. I purchased it from the original owner who did not use it much. Copy of the manual included. Price is $400 plus shipping. I also have the Drake PS-7 Power Supply that came with it, but it does not work. It looks good, but will not power up the TR-7. I have been using another PS-7 with the TR-7. I will sell the PS-7 for $50 plus shipping after the TR-7 sells.
Thanks, Charlie Hugg, K5MBX

If you want to run it at 120V with an output of 0-140V or so then connect the 120V line to the terminals marked 230V line, with the neutral (white) connection at the top. The output is on the output terminals with white on the top and black (hot) at the bottom. You should probably make some kind of cover for the terminals - the bottom left terminal will be at ~ 140V all the time and there are dangerous voltages on most of the terminals. It would also be a good idea to connect a ground lead to the frame.

>ham gear as a business, it has to be type accepted

There no FCC procedure for "type acceptance" of ham gear, so ham gear
can't *BE* type accepted.

There's certification for commercially produced ham gear, but that's a
totally different process from type acceptance, and it looks for
totally different things.  Calling certified gear "type accepted" is
like calling a ham a CBer - using the wrong term (which seems to be
common practice in English for a couple of decades now)

>    Also, if you sell an amplifier as a business, it can't operate the 12 or
>10 meter band.  However, it can be modified to operate it

But not by something as simple as cutting a prominent wire that's
labeled "don't cut this wire".  By changing capacitors and inductors,
yes - but that's home-brewing.

I have trouble retaining the memories chosen for the 4 freqcy
chnls. I removed the internal (very tiny 3 v nicad) unit and
brought out connector wires from the rear and attached 3 regular
1.3 V volt nicads (double A size) and wired them in series.
This worked ok except the charging time was quite lengthy so
left the rig turned on for a aouple of days till the externals
charged up.   This worked and kept the memories in tack, but
it affected the actual freq stored in each chnl thusly.
Cant set the freq offset to exactly +/- 25 or 250 or any other
even number.   It only accepts 26 or 251 or 601 as the +/-
(I/E adds one digit instead of 5 or 10. Still works but am
told "you cound like little off freqxy on xmit".

I am 100% disabled. I can not get a job, so I don't have to worry about a security clearance.

> Your credit rating matters.

In most cases, but not always.

> And I also note that many of those who are bad credit risks deal in cash only...because it is the only way others will deal with them.

I got in the habit of paying in cash about 35 years ago when I owned a business, and my suppliers gave a 1.5% discount for paying cash within 10 days of the monthly statement being mailed. I paid cash for vehicles whenever possible to save the finance charges. In 54 years I have financed one new truck, and one home, 30 years ago. I have no need for credit, because if I can't afford something, I'll do without it. The VA takes care of all of my medical needs, and everything else is paid for. I'm getting old and with my health problems I have no idea how long I'll be around. Its not the big deal it was when I was 20 years old.

I applied for a credit card in 1972 and was turned down because I was an E2 in the US Army. You had to be an E6 with five years to qualify, so I decided I was never going to waste my time applying again. The credit card companies have probably spent more trying to get me to apply for a card since them, than I would have used that Chevron card for.

I really can't travel very far, so I have no need to rent a car. In fact, my truck was out of commission for over a week before I was able to crawl under it and cut the damaged exhaust system apart and fix it. I asked the young man who volunteers for the "Computers for Disabled Veterans" project get me a few groceries, but otherwise I didn't miss the truck. He is learning computer repair, in exchange for helping me finish more computers.

I have always lead a simple lifestyle. Sure there are lots of things around, but I rarely buy anything new. Only when I can't fix something, or build it from what I can find. Its very satisfying to look at something you've built and have someone ask, Wow! Where did you buy that? :)

I have picked up a couple truckloads of free angle iron bed frames to build some work carts, but first, I have to build a welding table. I have a lead on free reject sheets of plywood from a local mill to make shelving out of. Any sheet that has a splice, or is missing any glue is rejected. I want to build some shelving to store the spare computer parts, and wood trays to hold Hard drives, CDROM drives and Floppy drives. That way they can be sorted, tested, and ready to drop into a computer, as needed.

BTW, I was given another Compaq like yours with the VGA connector sheared off the motherboard. It works with a replacement AGP card, but you know me. I'm going to replace the connector so I can see if the onboard video is still ok. ;-)

I think what people may be thinking about is that ham gear must be Part 15 certified (for the receiver) if it's commercially built, whereas home brew gear need not be.

that is rather bizarre.  the only thing i could possibly add would be
to be certain that you reset the processor after the battery was
charged....  perhaps in the loss and restoration of battery backup and
main power up and down, something the uP got scrambled, and is being
very well maintained in the incorrect state by your cool replacment
backup battery.

S 97.315 Type acceptance of external RF power amplifiers.

(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of type acceptance. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of type acceptance from the FCC.

(b) Any external RF power amplifier or external RF power amplifier kit (see S 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be type accepted for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:

(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:

(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or

(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.

(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before

April 28, 1978, by an amateur operator for use at that amateur operator's station.

(3) The amplifier was:

(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or

(ii) Modified by the licensee for use at the licensee's station.

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.

(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

(c) A list of type accepted equipment may be inspected at FCC headquarters in Washington, DC or at any FCC field location. Any external RF power amplifier appearing on this list as type accepted for use in the amateur service may be marketed for use in the amateur service.

S 97.317 Standards for type acceptance of external RF power amplifiers.

(a) To receive a grant of type acceptance, the amplifier must satisfy the spurious emission standards of S 97.307(d) or (e) of this Part, as applicable, when the amplifier is:

(1) Operated at its full output power;

(2) Placed in the "standby" or "off" positions, but still connected to the transmitter; and

(3) Driven with at least 50 W mean RF input power (unless higher drive level is specified).

(b) To receive a grant of type acceptance, the amplifier must not be capable of operation on any frequency or frequencies between 24 MHz and 35 MHz. The amplifier will be deemed incapable of such operation if it:

(1) Exhibits no more than 6 dB gain between 24 MHz and 26 MHz and between 28 MHz and 35 MHz. (This gain will be determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier); and

(2) Exhibits no amplification (0 dB gain) between 26 MHz and 28 MHz.

(c) Type acceptance may be denied when denial would prevent the use of these amplifiers in services other than the amateur service. The following features will result in dismissal or denial of an application for the type acceptance:

(1) Any accessible wiring which, when altered, would permit operation of the amplifier in a manner contrary to the FCC Rules;

(2) Circuit boards or similar circuitry to facilitate the addition of components to change the amplifier's operating characteristics in a manner contrary to the FCC Rules;

(3) Instructions for operation or modification of the amplifier in a manner contrary to the FCC Rules;

(4) Any internal or external controls or adjustments to facilitate operation of the amplifier in a manner contrary to the FCC Rules;

(5) Any internal RF sensing circuitry or any external switch, the purpose of which is to place the amplifier in the transmit mode;

(6) The incorporation of more gain in the amplifier than is necessary to operate in the amateur service; for purposes of this paragraph, the amplifier must:

(i) Not be capable of achieving designed output power when driven with less than 40 W mean RF input power;

(ii) Not be capable of amplifying the input RF driving signal by more than 15 dB, unless the amplifier has a designed transmitter power of less than 1.5 kW (in such a case, gain must be reduced by the same number of dB as the transmitter power relationship to 1.5 kW; This gain limitation is determined by the ratio of the input RF driving signal to the RF output power of the amplifier where both signals are expressed in peak envelope power or mean power);

(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii) of this Section when driven by an RF input signal of less than 50 W mean power; and

(iv) Be capable of sustained operation at its designed power level.

(7) Any attenuation in the input of the amplifier which, when removed or modified, would permit the amplifier to function at its designed transmitter power when driven by an RF frequency input signal of less than 50 W mean power; or

(8) Any other features designed to facilitate operation in a telecommunication service other than the Amateur Radio Services, such as the Citizens Band (CB) Radio Service.

> The kids on IRC are using home grown abbreviations to cut down on the number of symbols they need to type to convey a message... Hams do the same thing when using RTTY, or CW.
>

Chuck,
you do point out an interesting fact:
in the last 15 years or so, the written language of the internet has come into its own. it is not unlike English in many respects (American English is an "evolved" language, much like "net speak").

today's kids know this language well and it does, in fact, convey a lot of information with a minimum of keystrokes. replacing letter combinations (the ATE sound) with numbers (like 8) can shorten word lengths while still sounding the same.

there is already research going on per this subject and several prominent papers have been presented over the last few years.... it won't be too long before someone actually engineers an alphabet for the net. that will be neat to see.

and to think, hams are the ones that actually originated tis concept with CW starting over 70 years ago.

True, but Part 15 testing has nothing to do with type acceptance.  AND,
amateur radio gear is still required to meet the Part 15 radiation
specifications even if the equipment is homebrew.  You don't need to
send it off to a certification lab, but if you're radiating trash out
of band, you're in violation of the law.

I'll say that the broadcast service normally requires type acceptance
on transmitters as well, BUT there's still an exception for homebrew
broadcast gear... your local AM station can put a homebuilt transmitter
on the air as long as it meets the technical specifications and it has
a nameplate on the front stating that it was homebuilt.  (The wording
required is quite specific but it's listed in Part 73.)

It still has to meet Part 15 specs (all incident radiation devices
do), it just doesn't have to be certified before you use it.

I had been on ebray since they billed via postal mail and gave $10.00 credit to start

you out.

Recently I had the wonderful experience of having paid my ebay via Payless Pal and when

I went to pay the small bill.. a few bucks.   THEY made an 8 cent error in the

bill transfer and so I figured they would just bill it on the next months cycle.

BUT! What they did was to debit a closed bank account.

I had opened a checking account to get a Payless Pal account and closed

it so my real money was never in jeopardy. So what the idiots had done then was

to bill me an additional $15.00 for a bounced debit they should have never made.

In the mean time ebray has gotten so big I could not get any 'Real response from a

Real person'   Like dealing with the government! I could find no Phone number to call and explain THEIR ERROR.

I just kept getting junk Spam replies from ebray.

It makes them feel good telling me I can not use ebray.   pftpftpft!

So I have since closed my ebray account.

AND my Payless Pal account a soon as I heard ebray had bought them.

For several months ebray kept billing me with additional "late charges"

HA HA ebray and Payless Pal get stuffed!

All over 8 cents they have lost a lot more than that in business since I am also

disabled and did shop over 100 items on ebray. It WAS convenient to use

and not walk through so many flea markets and hamfests. My rating WAS over 98%

Couldn't please everyone, and some sent me junk from trash cans smell and all . lol

Thanks for the vent.. off my soap box now and shopping elsewheres. :-p

Both radio's are complete with mic,bracket, power cable, and original boxes.
One has a copy of the manual, other has original. These units are in good
condition and work very well.
$300.00 for the pair plus shipping from 19518
I'll only ship to Cont. US. USPS money orders only.
Any questions please email direct.

So you closed a bank account and didn't tell PayPal?    This whole mess is
your fault.

eBay is the best.   I've bought hundreds of items worth many thousands of
dollars.   Most of it could never be found locally for the same price.
Anytime I'm looking to buy *anything*, I look at eBay first.

Mike

American English: "Can" = "May". "Can" seems to be preferred in
common usage. (Then again, just look at how some of our kids spell on
Usenet and in IRC and, knowing that any of them can grow up to be
president, be very afraid.)

>>   I think the stink arose on the posting, because the person posting the

>He may have been blasted for top posting.

Neither of us who took issue with his post mentioned his top-posting.
We both blasted him on pure content.

Nope... closed account ebray opened with that was used long ago.
Was active via Payless Pal till they made a mess of it all so I closed that
account
so they couldn't rob me just for THEIR 8 cents MISTAKE.   Plus their
withdraw
penalty, plus their late fees.   UGH!
Had they replied with an 8 cent request there was more than 8 cents in
my Payless pal account at the time.   Just as reasonable as the Gvnmt LOL

Just the same as auto deposit from anyplace... they have access to get what
ever they want and you have to litigate it to get your own money back.
Being on SS disab' I'd starve before I got my money back if any were taken.
I never trust them with my whole paycheck.... I wonder why anyone does.
  Oh!.... That's so they can get in the news by being e-robbed. Phished etc.

Good luck Y'all

I also keep my Norton AV etc up to date and turned on ALLWAYS

Yeah I left the Unit on for 2 days just to charge the external
BU batteries.   But still no retention of settings.   I originally
had 3 AAA type celles in the same place outboard so next thing to
try will be  use 2 only.  Maybe 3 was the cause of the added
digit of "1"  on the offsets.  Thsese were all lithydride types.
               Tnx for response
                    Joe

That is not correct.  If you ask "can I eat a caramel, my reply is you may
(permission) if you can (ability).  For all I know you're toothless and have
no ability to chew.

If you correctly ask "may I have a caramel" the correct reply is, "yes, you
may."

Don

Hmm, you think that spelling is a reflection on intelligence? Spelling is a rather arbitrary transliteration of vocal sounds into written text. I have known some incredibly brilliant people that couldn't spell their way out of a wet paper bag, and I have known some extremely facile spellers that couldn't reason their way out of that same bag.

The kids on IRC are using home grown abbreviations to cut down on the number of symbols they need to type to convey a message... Hams do the same thing when using RTTY, or CW.

I am sort of curious as to why my posting of the actual FCC part 97 rules that cover linear amplifiers drew exactly zero comments.

I do... and it's amazing they can communicate at all.

So if everyone under 20 confuses "can" and "may" does this make the
misuse of either word correct?  Hardly.  If a million people do a stupid
thing, it's still a stupid thing.

Believe it or not, grammar does have a place in this world.  It's the
correct means by which we communicate.  If we can't communicate
correctly, we shouldn't be surprised when things don't go the way we
want them.

Just my 2 cents.

Yes, but that just tells me there are too many uneducated or lazy people.

Hello,
I'm very undecided between these two rigs, please, could someone who tested both or know them give me a suggestion ?
FT-2000 will be available to buy within a few weeks and I'd like to be convinced to choose it.
Of course I read eham reviews (http://www.eham.net/reviews/detail/5641) and it seems to me that FT could be the best choice.

BTW, this sentence from AD9P is fantastic "Now I could just convince my wife that I need both", I do believe I'll need to do it too ... :))

Thanks for any help.

Luis

Wow... someone probably just reefed on a video cable that was still screwed into the connector and ripped it off?

I would wager that you'll find it will work just fine if you can successfully re-attach a connector (and repair any damaged traces!)

---Joel

I'm looking for a Motorola Converta-com for the Jedi series radio's. I need
one that will work with the MTS2000 Flashport 800mhz TypeII portable.

Thanks,

pottsladd13@yahoo.com

ROFL

Why do you have to tease the retard?  It's not helping my effort to save ham
radio from becoming like CB.

SC

Hello,
I'm urgently looking for a Yaesu FP-27 internal power-supply. This part is out of stock everywhere so if somebody knows a source please let me know.

73

Hi all,

I am in need of four (4) type VT-4-C / 211A vacuum tubes for display only. "Dud" tubes would be just fine as long as they look OK. These will be installed in the BC-375-E transmitter that is on display in the exhibit hall at our Museum hangar. That radio will eventually be installed in the radio compartment of our B-17G Flying Fortress bomber. I am looking for a donation here, and once again I stress that I'm NOT looking for good tubes because they are only for display. We are a 501(c)(3) non-profit aviation museum, and all donations are tax-deductible. Can someone help us out with 1, 2, 3, or 4 tubes?

Thanks and 73!

The 211A is in current production by a number of manufacturers, and
the high end audio guys really like them. You might try asking on
rec.audio.high-end if anybody has any pulls. You may be forced to
use Chinese ones, mind you, but that is probably fine.

No damaged traces, but someone covered the exposed terminals with black electrical tape over the HDE15 knockout. The 15 pins aren't too hard, but removing the two spring loaded mounting clips is the bear. If the onboard video is bad, I'll remove it and put one of the old DE-9 filler plates over the hole.

Xref: g2news2.google.com rec.radio.amateur.equipment:6471

I have two VHF Transceivers for sale cheap:
1. Icom IC-27H, 2 Meters, 45 Watts, has Mic, Manual, Mobile Mt. Tone Board.
This transceiver
looks new and transmits with full output. But the receiver audio is very
low. I would guess that the
audio transistor is out. Everything else works great. Price is $55;
2. KDK Model FM-2015R 2 Meters, 15 Watts, Mic, Manual, Looks and works like
new. Fixed Tone,
Price is $60. Very little time on both of these radios.
Shipping from 79602 is extra. Thanks, Charlie Hugg, K5MBX
```

Actually I thought the 11 Meter band was given to CB in 1955 and not 1957. A
very mute point indeed.

What is there on which to comment? "Can't argue with the horse's mouth"

(not quite right, is it?)

Here's another one: "If you can't dish it out, don't cook it." I have a
friend who came up with a whole page of malaprops (collected sayings
from his wife)

Well, I sort of thought it might draw a few "Oh, gee, I guess commercially made ham linears have to be FCC type accepted after all"'s.

The guy making the CB linears fails a whole laundry list of requirements for type acceptance of a Ham linear.

And because he isn't a ham, he cannot legally build even *one* such unit, let alone go into production.

-Chuck Harris

Markie makes good sentence!
Except for the fact Roger isn't Jewish, Markie. You claim to be, then
before you claimed to be a Pagan. You can't get your lies straight.

>very mute point indeed.

That was the Class D citizens band. I believe Class C is also in the 27 MC
range, with low bandwidth digital modulation for remote control, etc.

Whatever happened to classes A and B? I recall Class A was AM on the 460 MC
band.... took a huge amount of bandwidth both because of the modulation
method and the fact the transmitters were generally not very stable...

I don't think anyone except him thinks otherwise.

The thing is... what will the FCC do about it? And are they going to do
anything about the touch lamps sold at my local Wal-Mart which spew trash
all over the HF band, or the local computer store which has a roll of
"FCC Part 15 approved" stickers which they put on uncertified (and often
uncompliant) PCs?

I'm not against having good hams, but can you tell me what your Inane
proposals have to do with that. Over 30 years I've seen tons of 20WPM Jerks
on the bands. CW has nothing to do with the people we get in.

Well...I quit eating red meat regularly about 20 some-odd years ago. I feel much better now with all that out of my system.

I do enjoy a slab or two of good ham at Christmas, though.

Oh I'm producing many more than one and they are selling like hot cakes.
There's not a damn thing you can do about it either so deal with it,
asshole.

   Enjoy! :-)

   Everyone else ought to remember the definition of ham: "Ham is
   the butchered meat of swine."

   There...now THAT's a troll!   :-)

What a Loon!  In one thread you think I'm Lloyd and in this thread you
think I'm Todd.   You're as confused as Mark and just as stupid.  Maybe
that's why you two get along so well with each other.

I am looking for a kenwood ts 511s.
Had one when I was first licensed and just wanted one for nostalgia.

You sure are, Toad.

Now don't talk with your mouth full of your daddy's cock.

You sure are basement dweller.

"N9OGL" <toddaugherty@yahoo.com> pegs the IRONY meter "with" his
stupidity in<1127811466.165152.74910@g43g2000cwa.googlegroups.com>:
"I know whith someone like you with your learning disability you
don't understand that if you want to make it in this world you need a
education, and not just a high school education."

Toad claims to be smarter, but fails to show it when he scribbled in
his mangled English in
<1141133519.708574.16440@u72g2000cwu.googlegroups.com>:
"You be suprised dumb ass what I can write, I'm a hell of lot smarter
then you dumb ass"

N9OGL the illiterate moron steps on his own words in
<1143982923.052054.100...@z34g2000cwc.googlegroups.com>:
"lean how to spell it write, moron."

Thank you for contacting the Abuse Complaint Administrator of the
Cypherpunks Tonga Remailer.
The administrator has processed your request to not receive emails from
this anonymous remailer. This remailer will no longer send emails to
the
email address(es) for which you requested a block. Note that due to
fact
that Internet email can arrive at the destination out-of-sequence, it
is
possible, though unlikely, that you may receive emails from this
remailer that were sent prior to your blocking request, but have not
yet
been received by you.

We again wish to apologize for any inconvenience that may have been
caused to you.

Sincerely,

-- The Cypherpunks Tonga Remailer Administrator

>
> Norman get some professional help, you need it. Norman has lots of Ham gear and tools in his garage in the back, the neighbors have cut his coax a couple times for ripping up their tv's and phones, poor Norman he is a recovering alcoholic, I use to smoke a little pot with him but he couldn't handle it and the booze together.
>
> Now Norman claims to be a saint, a reformed drug and alcohol abuser, ah our past eh Norm, remember that black whore who took your 30.00 bucks, ah ha ha I got some of that pussy in the back seat of your caddy and you got ripped off, or did you pay to just watch, ah ha ha, you freak.
>
> See Norm, when you talk about me it gets back, remember we were friends and I know plenty about your personal life and the years we worked together at the EJ&E RR, I'm not ashamed of anything I have done in my life, it was all a great experience and I wouldn't trade it for nothing, I have enjoyed my life, some good some not so good, at least I'm not a lonely old bastard who hates as you do, I have a wife and a nice home that's almost paid off from my settlement, 5 more years and I'm on easy street, I can go and buy anything I want at anytime, I have not lost anything especially myself as you have, I have friends and relatives close, I have grandkids that adore me, what do you have? you are such a miserable old bastard who is so paranoid someone is going to get something you have.
>
> Wake up Norman life is too short to be a mean old nasty asshole that hates and is envious of others, you won't listen, you will die an old nasty bastard who no one will give a shit about.
>

Since when have CB amplifiers been recognised as boatanchors or is this
topic just spam from unthinking cross posting?

Running more than 4 watts on 27 MHz in the US has been illegal since
CB became legal here - 1961 IIRC. I don't know what the rules are in
Oz.

It's always been illegal, but the amplifiers could be sold.  All those
"illegal for Class D Citizen Band use" in the Lafayette catalog on
the CB page decades ago were being sold for CB use.  And those and the
more underground amplifiers is what brought about the FCC rule in
the late seventies that put limits on amateur radio amplifiers.
Previously it had been too easy to sell amplifiers that were clearly
intended for CB (the giveaways were the low drive requirements and
the frequency range that wasn't much beyond the limits of the CB band),
but sold under the guise of "amateur radio amplifiers".  The new
rules of thirty years ago made all such amplifiers illegal.

Nevertheless, they have nothing to do with boatanchors.  They are
```

made today, they likely don't use tubes, they are intended for CB and
not amateur radio, and likely I'm likely forgetting other reasons.

Ten-Tec made an amplifier called the 405 for the Argonuat 505 and 509.
It's solid state but due to it's age may qualify as a boat anchor.
5 watts in 50 or so out.

Fairly rare due to the FCC rules, which BTW were dropped recently.

Geoff.

Al, yes more or less the same rules in Oz - type approval etc, but this gear is not considered as a collectable boatanchor though, so a bit off topic in the boatanchors forum - maybe an excess of cross-posting.

Simon

Actually it was 1957 when they took the 11 meter band from the HAMS and
created the "Class-D" Citizens radio service....The callsigns
were 11W1234 series of calls.
If this guy wanted to market these amplifiers and not attract the wrong
attention all he would have to say is they are for amateur use only, with
broadband coverage from 28 to 30Mhz.HAM gear does NOT require ANY "type
acceptance" at all..
It's not real hard to figure that they would indeed work on 21/24 and
27Mhz....food for thought....

You'd better look at the US regulations.

As I said, the existence of amplifiers for CB (but usually marketed
as something else) caused the FCC to bring in regulations in the late
seventies about amplifiers. It had always been illegal to use such
amplifiers on CB, but the new rules meant it was illegal to sell them.
The laws had nothing to do with amateur radio, but it did impact on amateur
radio. Those rules about amplifiers in that range are quite restrictive
compared to the general rules of amateur radio, and they exist because
another service was operating illegally.

```

Allright i bought an old variac from a deceased electronics guru. He had it wired for 120. the wire ing was in bad shape. so i tested it to verify it works and then i scraped the wire. the variac has been sitting for about a month. Now i need to use it and forgot how he had it wired up. an you all help?
here is a pic so you can see what im talking about.

http://i30.photobucket.com/albums/c311/kc8tpr/Variac.jpg

thanks,

steve

I have a Yaesu FT-2600M that turns off when keyed up, then comes right back on (in all power settings). I know the radio has high SWR protection and have tested the SWR on my antenna (Comet GP9N with 9913) and it's extremely low with an Icom IC-V8000 radio at full power. Does anyone know what could cause this? It wasn't used for a year or so before this and was working fine. It was mounted in my work van for 3 years. Under the cover it looks bran new with no blown components or smells. Thanks for any help.

Chris,

Normally I would agree that killfiles and delete buttons are certainly indicated in a case like this, but there is a certain amount of newsgroup etiquette that is warranted on your part, too. You can't just do whatever you want on a newsgroup with no accountability and expect everyone else to modify their behavior to accomodate yours. You even cite Usenet etiquette in your own post, so how about doing your share in applying said etiquette to yourself?

Regards,

Al

Home brew ham gear does NOT require ANY "type acceptance" at all..
Commercial ham gear must be type accepted.

Al, these guys don't care what we think. You should of read what they
said about my dead mother. I'm doing some research right now as who
said that and I am so sick of this I am ready to go on a road trip. He
doesn't realize that I am a disgrunted postal worker. Shouldn't of
said that about my dead mother!

make sure the power connections are all strong and clean.  perhaps the
fuse needs replacement, or the ground connection has oxidized.

I have seen similar things when radios try to draw higher current, and
the voltage drops to below threshold voltage for the radio, causing the
processor to restart..

Hi Mike,

RF could be getting back into the radio.   RF  can do some funky things.
Make BOTH power leads  go directly to the battery and for safety sake
fuse BOTH.
Also use heavy enough wire, say 14 gauge or better.  Make sure the
antenna connections are clean and good.
SWR protection just backs off the power to a safe level if the antenna
is messed up but will not shut down the radio.
If all else fails reset the CPU.  THen reinstall the memories because
they will be lost.
73 and good luck!

anyone with any radio knowledge at all knows that a "10 meter" amp is more
than broad enough to be used on 11 meters with very little retuning
required (hell, the band edges are less than 600 Khz apart!).

now, there are ways to make a 10 meter amp unusable on 11, but then, it
would be mostly unusable on the lower end of 10 as well. :(

so...... the label of a "10 meter amp" os pretty much meaningless, unless
you can come up with a bandpass filter that has a 90+db/decade slope and a
cutoff just 40 Khz from the edge of band you want to work (good luck with
that as the filter would be unwieldy in both size and cost). things like
this can be easily done on the upper UHF spectrum where wavelengths are
short and parts are easy to fabricate..... not so in the upper HF
(wavelengths >6 meters). can you imaging a cavity filter for 10 meters? it
would be as big as a house and have a bandwidth narrower than your
transmitters operating frequency plus its associated sidebands (am or fm)
and wider still than any ssb signal (on 10 meters)

the math on this is indisputable.

My understanding for the US, is that according to the FCC, if you sell ham gear as a business, it has to be type accepted, but you can "home brew" anything you want to use on the ham bands for personal use. If you sell your personal equipment, it doesn't need to be type accepted, either.

Also, if you sell an amplifier as a business, it can't operate the 12 or 10 meter band. However, it can be modified to operate it, but that fits in the "home brew" category, again.

I think the stink arose on the posting, because the person posting the original listing, advertised it as a CB radio amplifier, which is illegal in the US and from what I understand, most other countries. Notice that the original poster has not posted in a while, I believe he probably has been warned, because it is off-topic and cross-posted to more than 5 groups, which is considered spam according to the TOS with most ISPs.

What power supply are you running it with? Perhaps the problem lies there.
I've seen radios shut down on key up and come right back on when the power
supply is inadequate or bad.

Dee, N8UZE

KB9RQZ (Mark 'Morkie Moron' Morgan) feels right at home absuing the memory of my deceased daughter in order to try and gain "messaging leverage"...I have no doubt that he's your culprit.

Why does Morkie keep insisting that I am "lying" when all I am doing is quoting HIM verbatim?

I'm not.

Here's YOUR words AGAIN, Morkie:

Message-ID: <1158542716.987841.319690@m73g2000cwd.googlegroups.com>

KB9RQZ Said: "oh learning code is easy"

There you have it, folks! Morkie says learning code is easy!

Quoted Word For Word!

Steve, K4YZ

You are the one that posted about my dead mother. I am getting close to finding out who you are. Its not KB9RQZ. You are using his name and call. I have paid a someone to help me find out who you are. You crossed the line when you made the comment about my dead mother. You think this is a joke what you are doing on here. I'm not going to make any threats here but we will meet some day. Keep posting

> and fine example of why we need to end code testing soon

Code testing should NOT be thrown away. It is the one thing that keeps SOME of the lazy bastards off of HF. At least off HF legally! I hated to see the 13 and 20 WPM requirements lifted. I took the 20 WPM right off the bat. 5 is easy... there are 6 and 7 year olds, and 60 and 70 year olds who pass that. 13 isn't hard either. 20 just takes some practice. I went from no license, to extra in 1 year... when I was 15 years old. I went from knowing no code at all, to 20 WPM in 3 weeks of 2 hours per day listening to code tapes and copying the ARRL bulletins.

Code is a tradition. And don't try and compare code to slavery or something completely ignorant like that. They are apples and oranges.

Now, im sure you will all want to attack me for what I have said. So, go ahead. It doesn't matter to me. I have my extra. So, I really don't care either way. Quite honestly, I don't even operate anymore. The mentality of the people on HF has dropped so badly, I hardly ever operate except to speak to a family member once a week that is in Canada. And I talk on 440 simplex to a couple people here locally.

Reading this newsgroup reminds me of why I don't get on HF anymore. 75 meters and this newsgroup and many things in common.

indeed the floks like Wisemen and Slow code Heil and Robeson inheritied
the ARS from people of some vision and and have slowly had it pried out
of their hands.

they have failed to adapt and change with the time and thus lostthe the
place of the ARS in techinical inovation (wether that can be regained I
don't know) the have lost control of the ARS now. sadly the Nocoders
have not manged to fully grab control either

>
> And are the crystal cans of the HC6/U variety or the HC33?

Curtis-

The heterodyne crystals are HC6. I have one for 40 meters in my collection, although it is probably the bad one I saved. I think it was soldered into the PCB. If so, a wire-lead version should work as well.

Be aware that the heterodyne oscillator is one of the weak points of the radio. It requires a very high-Q crystal or it won't oscillate. You may be able to modify the circuit to increase feedback, and improve its performance.

According to my notes, the 20 Meter and 15 Meter heterodyne coils are the same part number. I don't know whether they use the same one for both positions, or have two that are individually tuned.

Considering the problems you face, it might be easier to convert 20 Meters to 30 and to convert 15 Meters to 17. Converting one of the Ten meter positions will be more of a challange.

73,
Fred

Received my License in 1977.

Funny I don't feel like I've lost anything, I've gained a lot since I
started, but haven't lost (well maybe the 220mhz
theft by lying scum of UPS but that's another story)
